How to read this manual

Each chapter explains one part of the CRM with numbered steps and screenshots. Words in a grey box, like `New Lead`, are buttons or menu items you click. The screenshots show a sample company, **Sharma Traders Pvt Ltd**; your screens show your own company's name and data.

> **Who needs which chapters**
>
> **Everyone:** the ★ page, chapters 1–5, 9, 12, 17 and 18. **Sales:** also 6–8 and 11. **Support:** also 10 and 13. **Company admin:** everything, especially 2, 15 and 16.

★ Lead, contact, deal, quote, task, callback: which one do I use?

These six are the steps of one sales journey. Use this page whenever you are not sure which button to press.

🎯 Lead → Convert → 👤 Contact + 🤝 Deal → 📄 Quote → Invoice → Paid

✅ Tasks and 🗓️ callbacks are reminders you can use at any step.

Record	Use it when...	How it works
🎯 **Lead**	A new person or business enquires: website form, phone call, referral, visiting card. You don't know yet if they will buy.	Enter the name, phone, **Requirement** and **Remarks**. CogniCRM scores the lead and suggests the next step. Move the status New → Contacted → Qualified, and add a remark after every call.
👤 **Contact**	The lead is serious, or it is an existing customer.	Click `Convert` on the lead: a contact, an account (if a company is set) and a deal are created, with the requirement and remarks copied. For a repeat order from an existing customer, don't add a new lead: open the contact and add a new deal.
🤝 **Deal**	There is a specific order with an amount, e.g. "₹2 lakh office furniture".	Move it through the stages Prospecting → Qualification → Proposal → Negotiation → **Won** or **Lost**. One customer can have many deals. The pipeline board shows all of them.
📄 **Quote**	The customer asks for your price.	On the deal click `Create quotation`, add products, rates and GST, then send it. When the customer agrees, click `Accept` and make the **invoice** in one click. Record the payment and it becomes **Paid**.
✅ **Task**	Any job you must not forget: send samples, site visit, follow up on a quote.	Give it a title, due date and time, and the person who should do it. They get a phone notification when it is due. Mark it **Done** when finished.
🗓️ **Callback**	The customer says "call me at 5 pm", or did not answer.	Click `Callback` on the lead or contact and choose the time. You are reminded exactly then; with auto-dial on, the call is started for you.

Task or callback?
Only need to **phone** the customer at a fixed time → **Callback**. Anything else (send, visit, prepare, follow up) → **Task**.

Example: one customer from start to finish

1. Ramesh ji calls: "We need CCTV for our warehouse." → add a **Lead** with Requirement "25 CCTV cameras".
2. He says "call me this evening" → schedule a **Callback** for 5 pm.
3. You talk and he is interested → add a remark, then **Convert**. A contact and a deal are created.
4. He asks for the price → from the deal, create and send a **Quote**.
5. "Follow up in 2 days" → add a **Task**.
6. He agrees → **Accept** the quote, make the **Invoice** and record the payment. The deal is **Won**.

1 Welcome to CogniCRM

CogniCRM keeps all of your customers, sales and conversations in one place. Your team uses it to:

- capture **leads** (people interested in buying) and follow them up until they buy;
- keep **contacts** and **accounts** (customers and their companies) up to date;
- track **deals** through your sales stages and see what is likely to close;
- send **quotations** and GST **invoices**, and record payments;
- call customers, schedule **callbacks** and keep notes of every call;
- reply to customers on **WhatsApp, SMS and email** from one inbox;
- never miss a follow-up, with **tasks and reminders** on the web and on the phone.

Web app and mobile app

	Web app	Mobile app
Where	Any browser: **https://crm.cognieos.in**	CogniCRM app on Android phones
Who	Company admin, managers, office staff, employees	Employees, especially sales and field staff
Best for	Setting up the company, team and roles, reports, quotations and invoices, imports, settings	Calling customers, callbacks, updating leads on the move, tasks, notifications

Both show the same data. A lead added on the phone appears on the web straight away, and the other way round.

Roles: who can do what

Each person has a **role**, which decides what they can see and do. The company admin sets roles under `Team` (chapter 15). The built-in roles are:

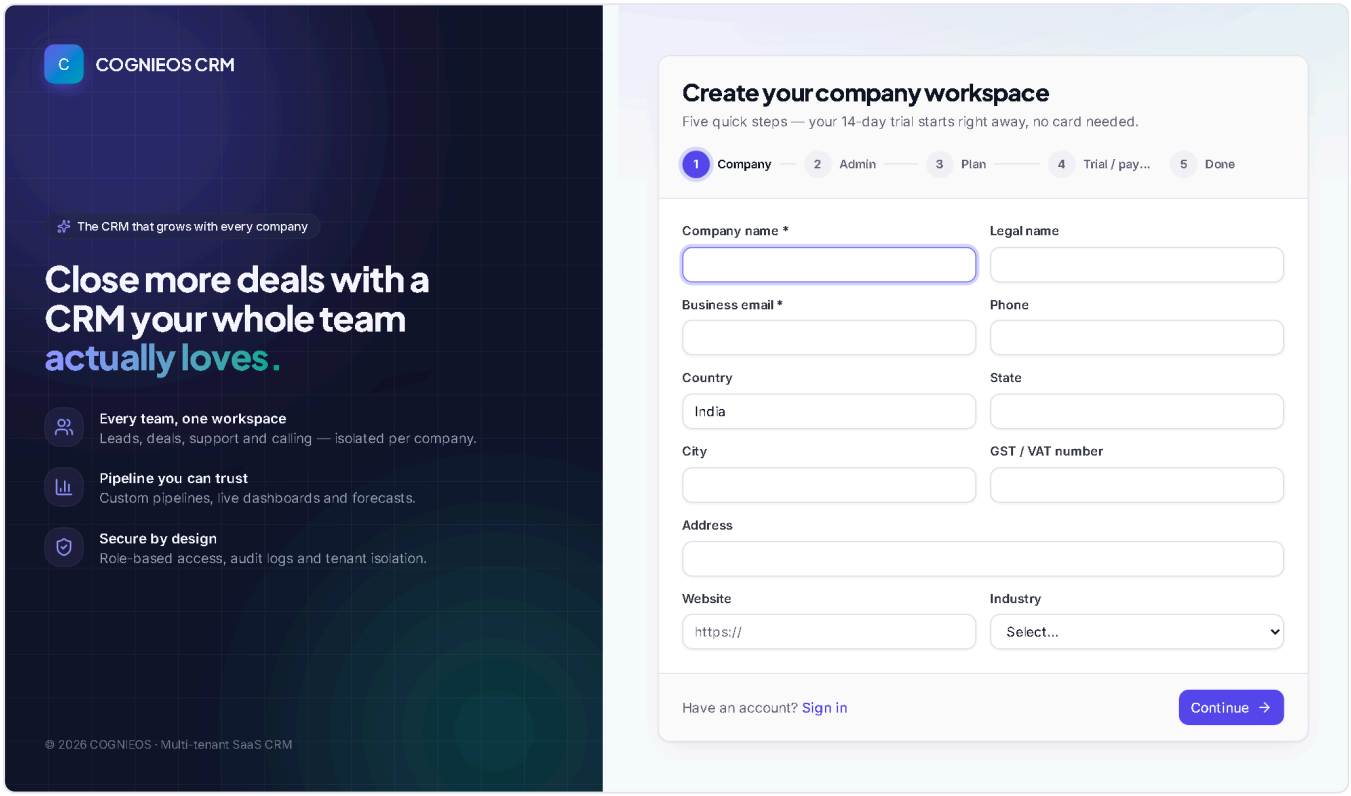

Role	Typical person	Can
Company Admin	Owner / IT	Everything, including team, roles, settings and billing
Manager	Branch or team lead	All CRM records, team reports, calling supervision
Sales Manager	Head of sales	All sales records, pipelines, team reports, campaigns
Sales Executive	Salesperson	Leads, contacts, deals, quotations, calls, messages
Support Manager	Head of support	Tickets, inbox, message templates, reports
Support Agent	Support staff	Tickets, customer messages, calls
Accountant	Accounts team	Quotations, invoices, payments, plan billing
HR Manager	HR	Adding and updating employees
Employee	Other staff	Their own tasks; can view CRM records

The admin can also create custom roles with exactly the permissions you need.

2 Getting started

2.1 Register your company (company admin, once)

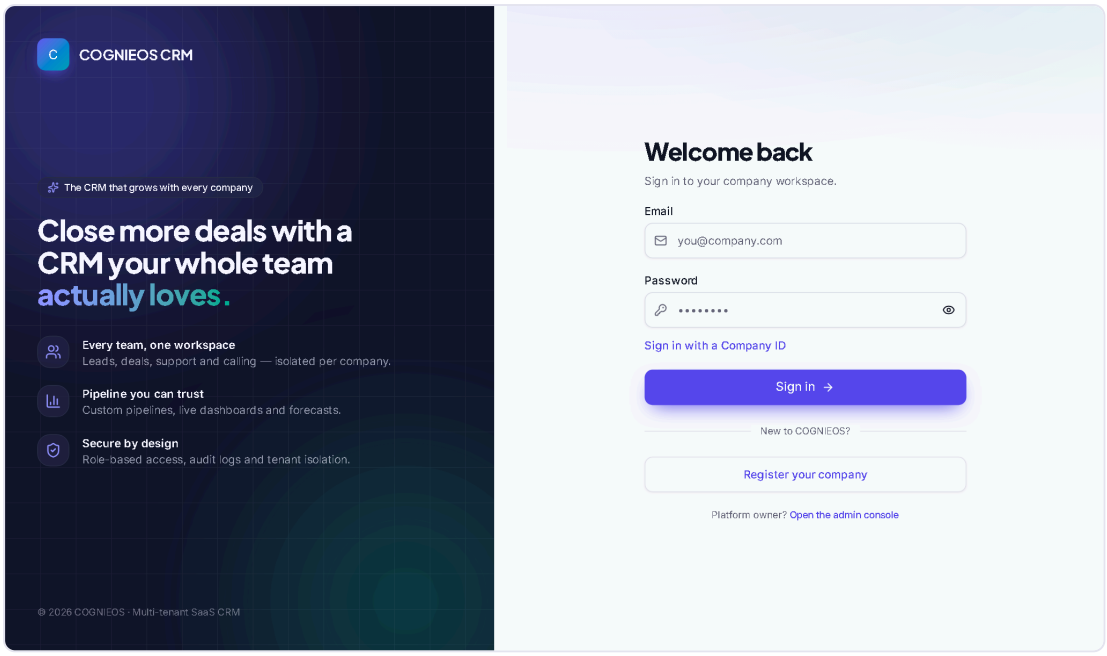

1. Open **https://crm.cognieos.in** and click **Register your company**.
2. **Company:** enter the company name, business email, phone, state, city, GST number and website. Fields with a * are required. If something is wrong, a red message under the field tells you what to fix.
3. **Admin:** enter your name, login email (leave it empty to use the business email) and a password of at least 8 characters.
4. **Plan:** choose a plan. You can start with a free trial; no card is needed.
5. **Trial / payment:** start the trial, or pay now if online payment is offered.
6. **Done:** note your **Company ID** (for example CMP-000123). Click **Go to dashboard**.

Registering a company: five short steps.

2.2 Sign in

1. Open **https://crm.cognieos.in**.
2. Enter your **email** and **password** and click **Sign in**.
3. If your email belongs to more than one company, choose the company. You can also click **Sign in with a Company ID** and type your Company ID.

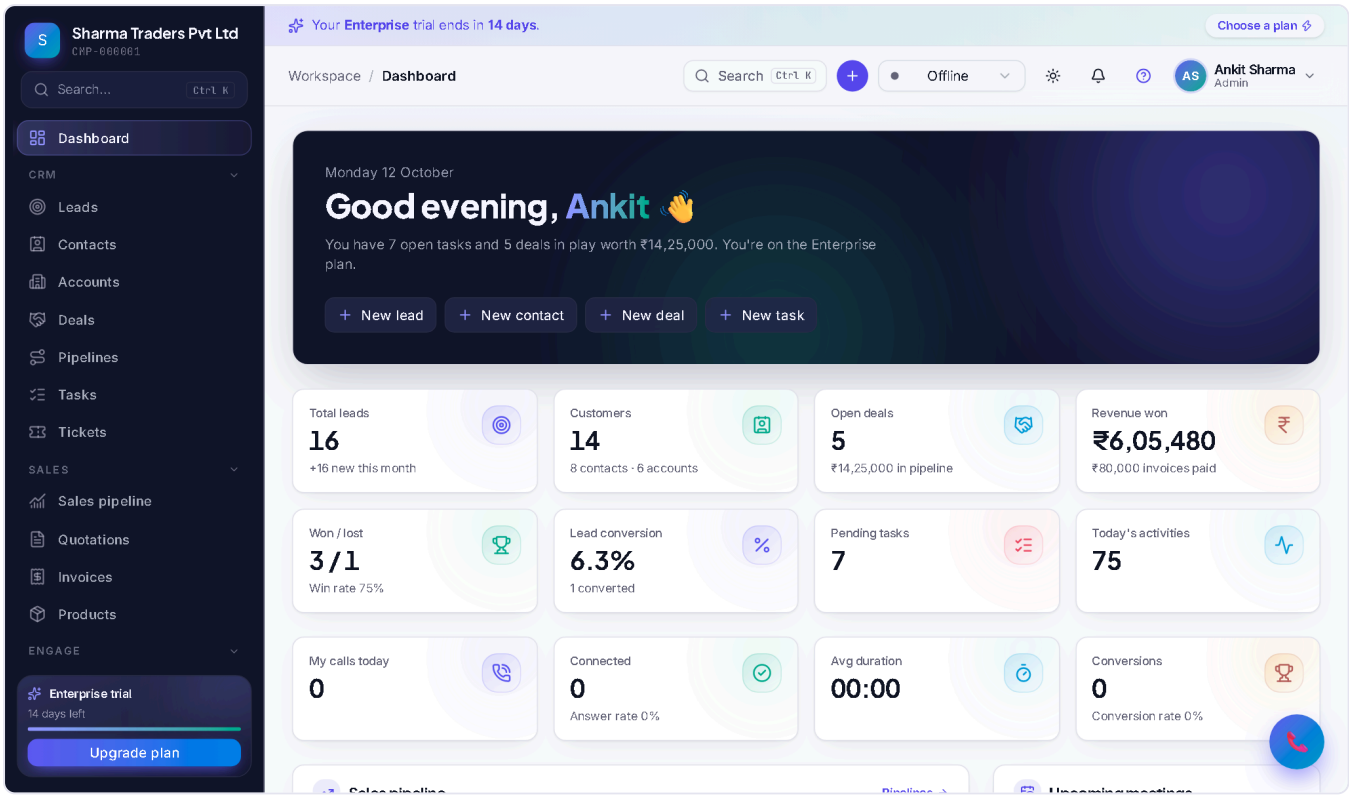

The sign-in page.

> **Saved passwords work**
>
> Your browser can remember your email and password. For security, you are signed out automatically after 12 hours; just sign in again.

2.3 First steps for the company admin

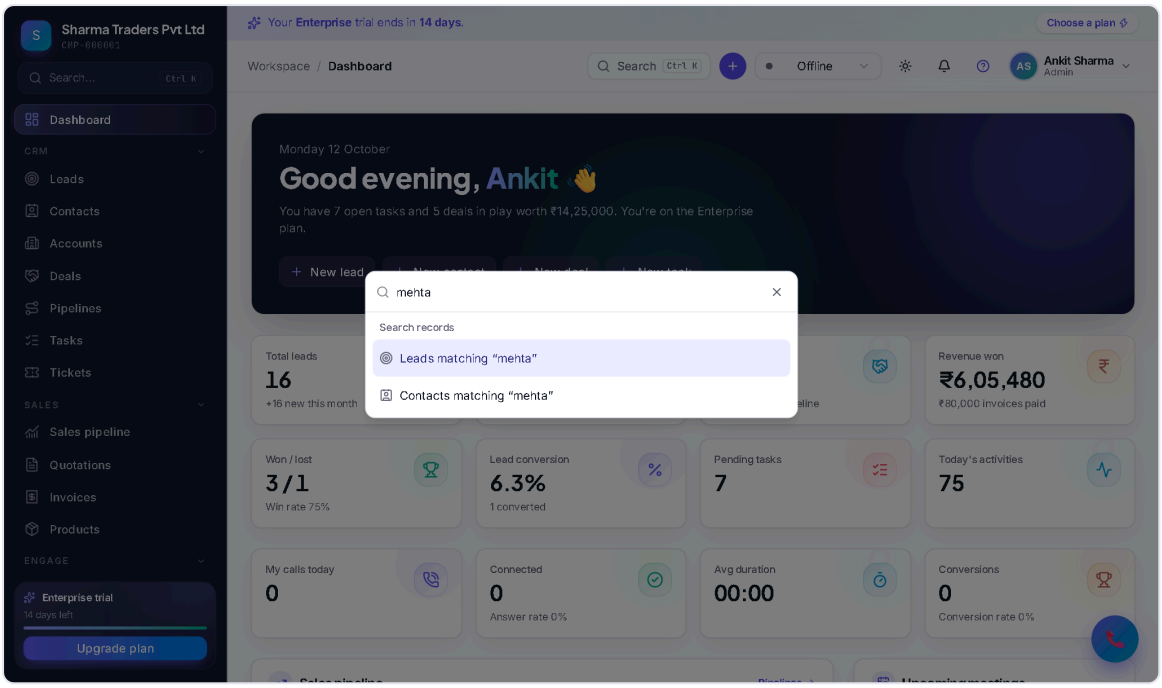

1. **Company details and logo:** `Settings` → `Company` (chapter 16).
2. **Invoice details** (GSTIN, state, bank, UPI): `Settings` → `Invoice details`. Needed for correct GST on quotations and invoices.
3. **Add your team:** `Team` → `+ Add user`, with the right role for each person (chapter 15).
4. **Products:** add what you sell under `Products`, so quotations fill prices and GST automatically.
5. **Existing data:** import your leads and contacts from Excel (chapter 6).
6. **Mobile app:** give the CogniCRM app to your employees (chapter 17).

3 Finding your way around

The main screen: menu on the left, toolbar at the top, your work in the middle.

Part of the screen	What it does
Left menu	Every section: **CRM** (Leads, Contacts, Accounts, Deals, Pipelines, Tasks, Tickets), **Sales** (Sales pipeline, Quotations, Invoices, Products), **Engage** (Inbox, Calling, AI assistant) and your company's settings. You only see what your role allows.
Search `Ctrl` + `K`	Find any lead, contact, account or deal by name, phone or email, or jump to a page.
`+` button	Quickly create a lead, contact, deal or task from any page.
Status (Available / Busy / Offline)	Tells the system whether you can take calls.
Bell	Your notifications: tasks due, callbacks, new messages, quotation opened or accepted, and more.
Sun / moon	Light or dark screen colours.
Your name (top right)	Change password, Settings, Team, Billing, Log out.
Green phone button (bottom right)	The softphone, when calling is set up for your company.

Search with Ctrl+K: type part of a name, company or phone number.

Search tips

You can type the start of any word: "shar" finds Sharma, "mehta info" finds Mehta Infotech, and "98110" finds phone numbers starting with those digits.

4 Dashboard

The dashboard is the first page after you sign in. It shows your company at a glance:

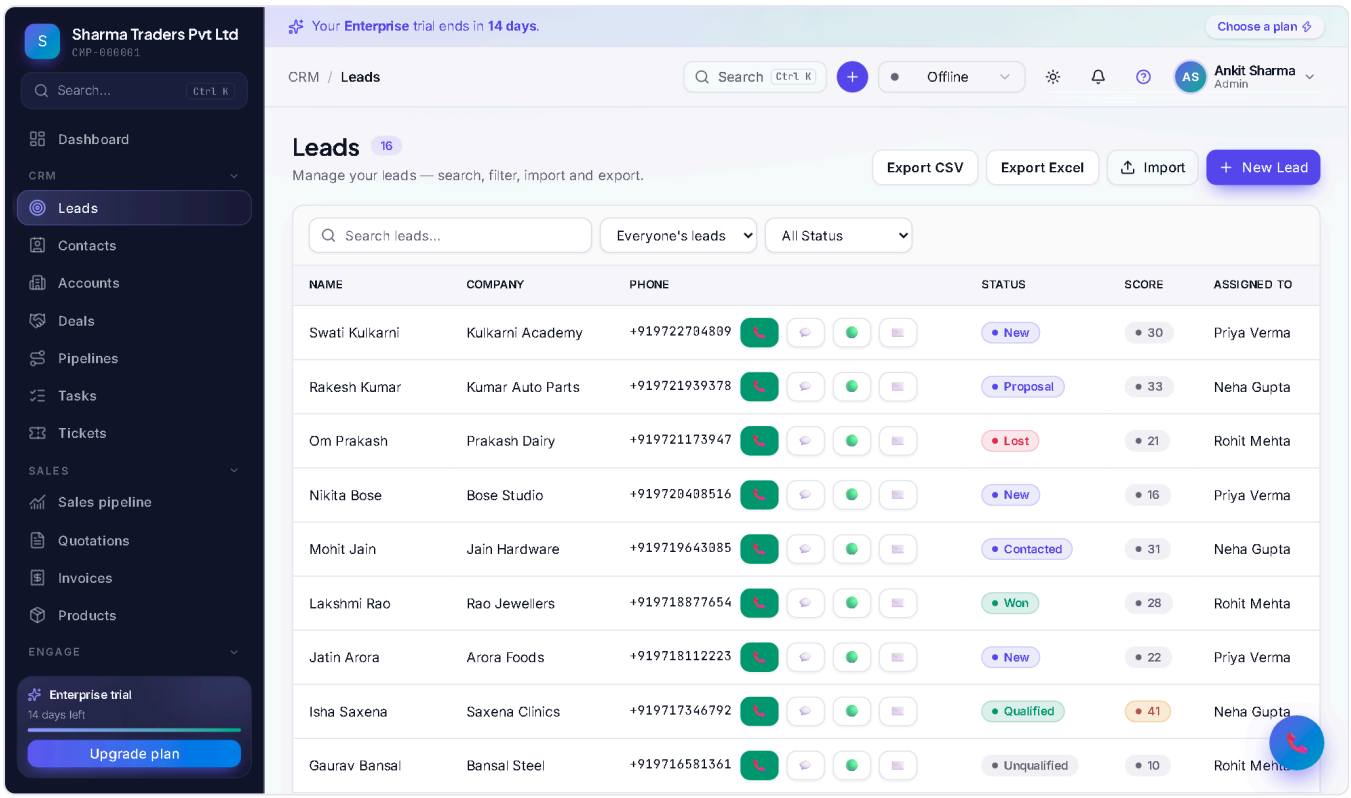

- **Total leads** and how many are new this month;
- **Customers** (contacts and accounts);
- **Open deals** and their total value in the pipeline;
- **Revenue won** from won deals, and invoice payments received;
- **Won / lost** deals and the win rate, and the **lead conversion** rate;
- **Pending tasks** and **today's activities**;
- your **calls today**, answer rate and average call length;
- further down: the sales pipeline by stage, upcoming meetings, your open tasks and the hottest leads.

The buttons at the top (`New lead` , `New contact` , `New deal` , `New task`) open a form straight away.

> **Always up to date**
> The numbers refresh as soon as anyone in your company adds or changes a record.

5 Leads

A **lead** is a person or business that may buy from you: an enquiry from your website, a call, a referral or an event.

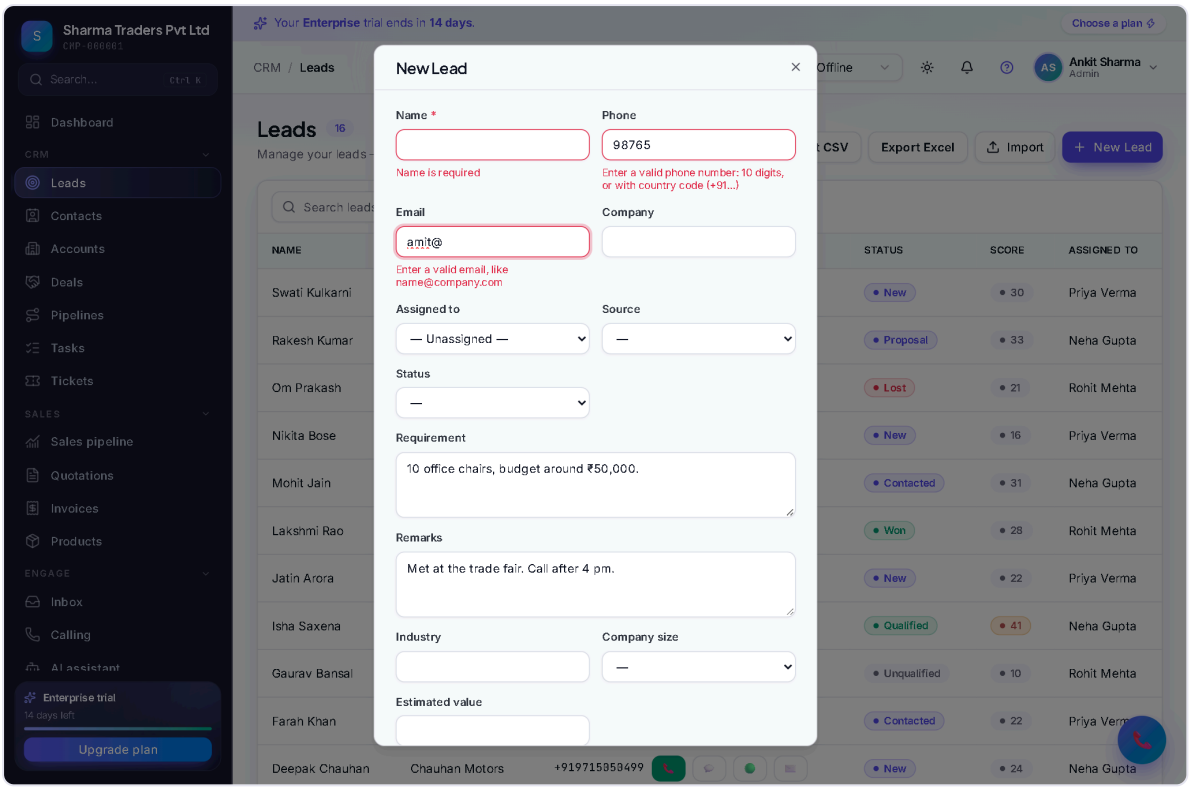

The leads list with search, owner and status filters, and quick call / message buttons on each row.

5.1 Find leads

- **Search** by name, company, email or phone (start of any word).
- **Everyone's leads / My leads / a team member:** show only the leads assigned to someone.
- **All Status:** show only New, Contacted, Qualified, Proposal, Negotiation, Won, Lost or Unqualified leads.
- Long lists are split into pages of 50. Use **Previous** and **Next** at the bottom.

5.2 Add a lead

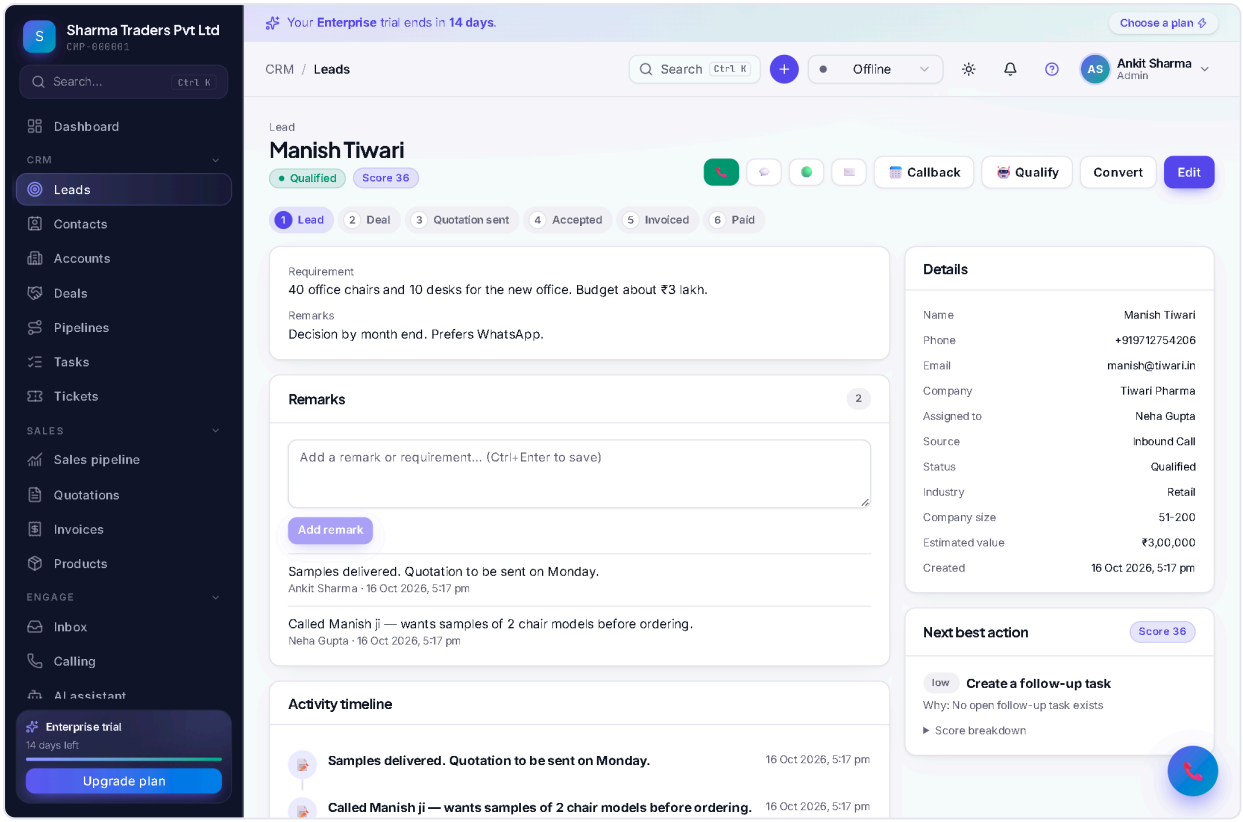

1. Click **+ New Lead**.
2. Enter the **Name** (required), and if you have them the phone, email and company.
3. Choose who it is **Assigned to** (leave empty to keep it yourself), the **Source** (website, referral, inbound call…) and the **Status**.
4. Write what the customer needs in **Requirement** (product, quantity, budget, timing) and anything else useful in **Remarks**.
5. Add industry, company size and estimated value if you know them.
6. Click **Create**. The lead opens on its own page.

The form checks what you type. Red messages show what to fix before you can save.

Field	Accepted
Phone	10-digit mobile number, or with country code (+91 98765 43210). Letters cannot be typed.
Email	A full email address, like name@company.com.
Name	Must contain letters (not only numbers).
Estimated value	A number of 0 or more (no ₹ sign needed).
Requirement	What the customer needs, e.g. "20 steel racks, delivery before Diwali".
Remarks	Anything the team should know, e.g. "Referred by Gupta ji, call after 4 pm".

5.3 Work on a lead

A lead's page: action buttons at the top; requirement, remarks and the activity timeline on the left; details on the right.

- **Call, SMS, WhatsApp, email:** the round buttons next to the name. Calls and messages are saved on the timeline.
- `Callback`: schedule a call back at the time the customer asked for. You get a reminder at that time.
- `Qualify`: the AI assistant suggests whether the lead is worth pursuing and why (if AI is enabled).
- `Convert`: when the lead is ready to buy, turns it into a contact (and account) so you can create deals and quotations.
- `Edit`: change any detail, including who it is assigned to.
- **Requirement and remarks** from the form are shown in full at the top of the page.
- **Add a remark:** type in the **Remarks** box and click `Add remark`. Everyone in the team can see remarks.
- The progress bar (Lead → Deal → Quotation sent → Accepted → Invoiced → Paid) shows how far this customer has come.
- **Score** (0–100) and **Next best action** suggest which leads to work on first and what to do next.

5.4 Keep remarks up to date

Every remark is saved with **who wrote it and when**, newest first, so anyone who picks up the lead knows the full story. Write one after each call, visit or WhatsApp chat: what the customer said, what you promised and what happens next. The same **Remarks** box is on contacts, deals, accounts and tickets, and in the mobile app.

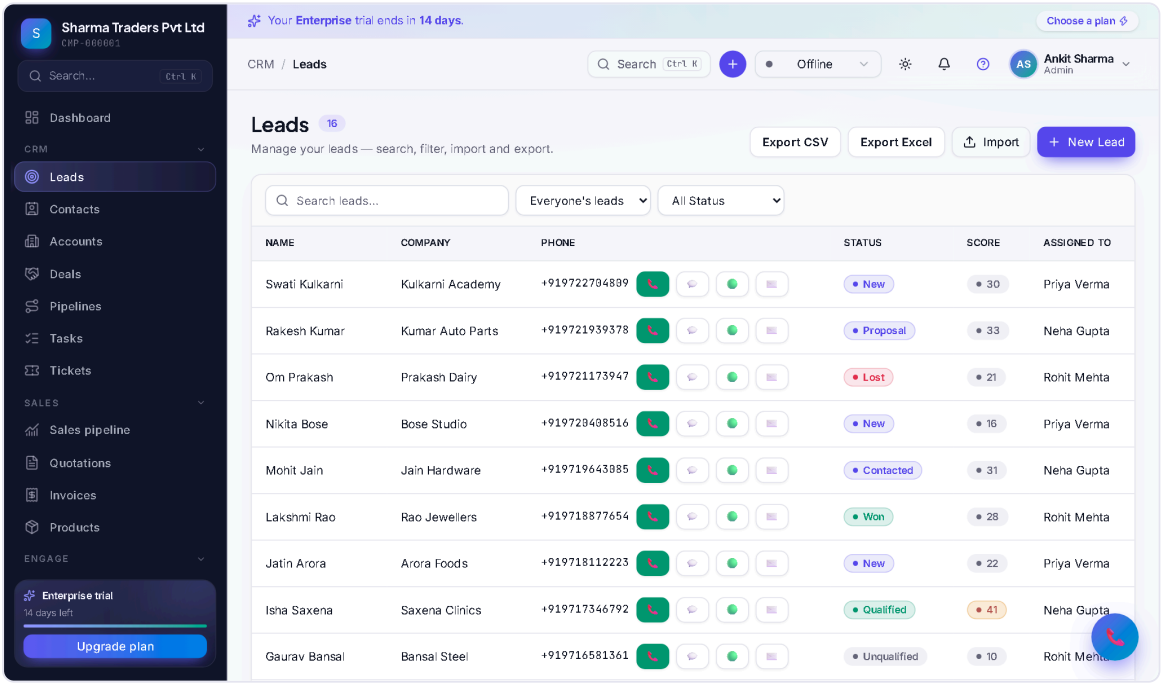

> **Requirement or remark?**
> Put what the customer **wants** in **Requirement**, and edit it if it changes. Use **remarks** for the story: calls, follow-ups, objections, promises. When you convert the lead, both are copied to the new contact and deal.

6 Importing and exporting data

You can bring in leads, contacts, accounts, deals, tickets and tasks from Excel or CSV, and download them at any time.

6.1 Import from Excel

1. Open the list (for example **Leads**) and click **Import**.
2. Click **Excel (recommended)** to download the template.
3. Fill one record per row on the first sheet. Keep row 1 (the column names) as it is. Required columns are highlighted. Status, Source, Company Size, Owner and Yes/No columns have drop-down lists. The **Instructions** sheet explains every column, with an example.
4. Back in CogniCRM, choose the file and what to do with records that already exist: **Skip**, **Update**, or **Always create new**. Existing leads are matched by email or phone.
5. Click **Preview** first. Nothing is saved yet; you see how many rows will be created, updated or skipped, and the exact row number and reason for any problem (for example "Phone: 12345 is not a valid phone number").
6. Fix the problems in your file if needed, then click **Import**.

The import window: download the template, choose the file, preview, then import.

> **Dates and phone numbers**
> Dates can be written as 31/12/2026 or 2026-12-31. Phone numbers can have spaces, dashes or +91.

6.2 Export

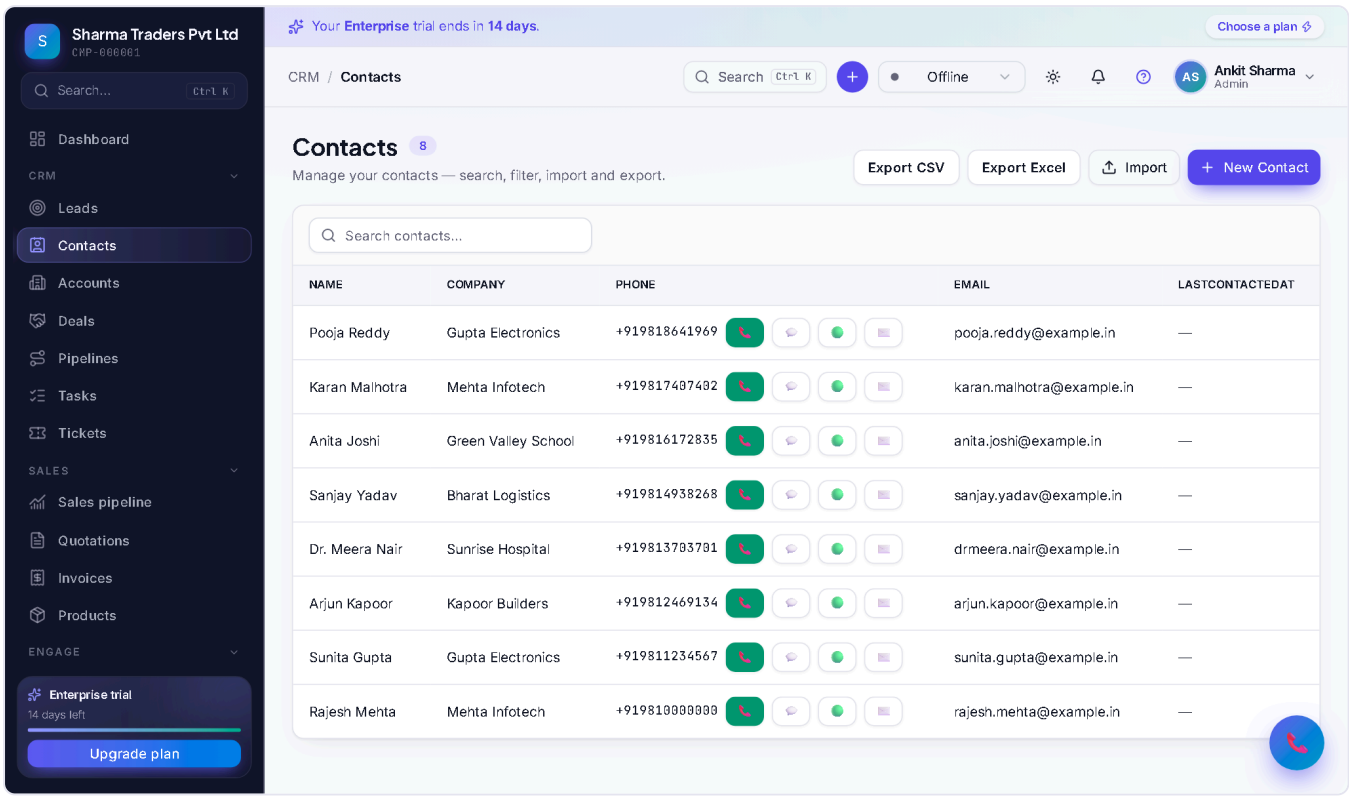

Click **Export CSV** or **Export Excel** on any list. The file contains the records that match your current search and filters (up to 2,00,000 records at a time). An exported file can be edited and imported again to update records in bulk.

Who can import and export

Only roles with import or export permission see these buttons. Every import and export is recorded in the audit log.

7 Contacts and accounts

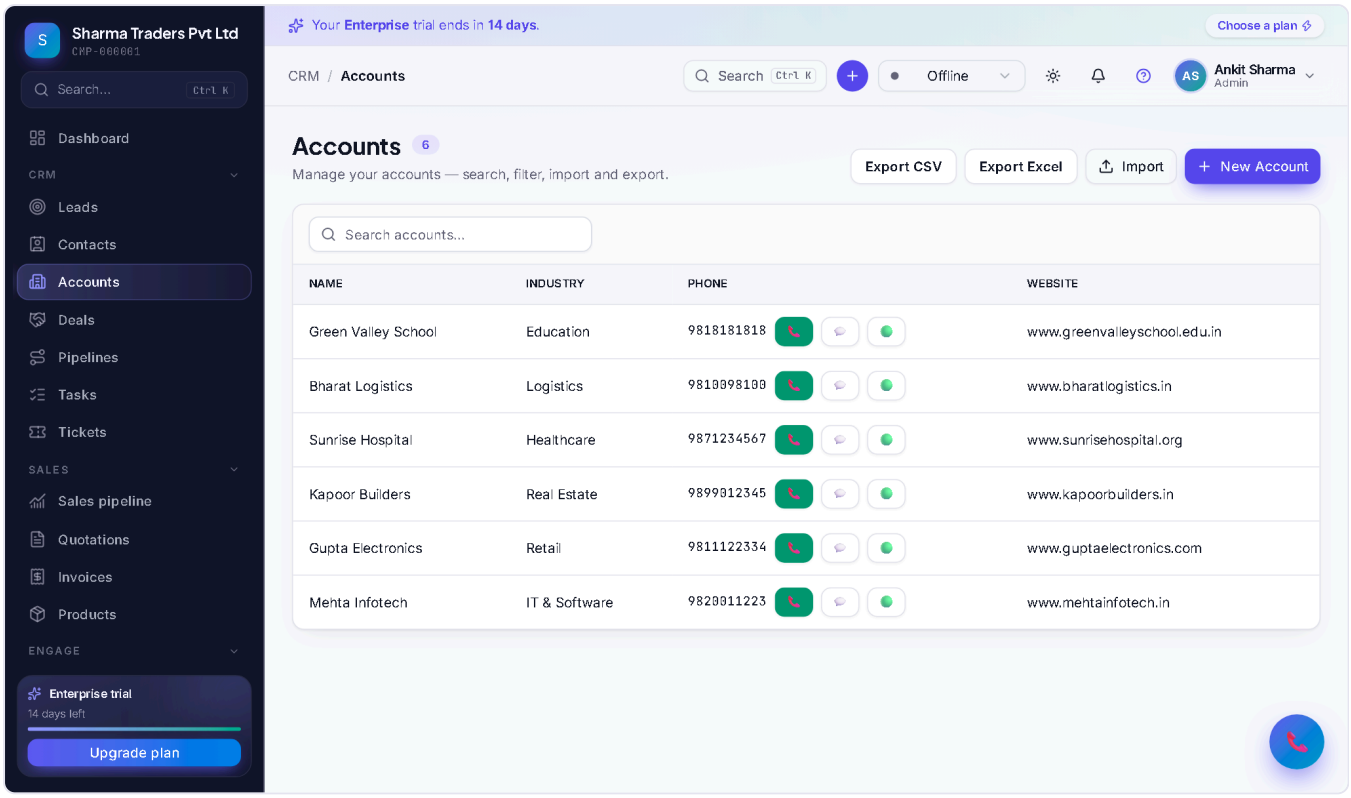

Contacts are the people you do business with. **Accounts** are their companies. A contact can belong to an account, so you can see everyone you know at one company.

Contacts.

Add a contact or account

1. Click `+ New Contact` (or `+ New Account`).
2. Enter the first name (required) and the details you have.
3. To link the contact to a company, click the **Account** box, type part of the company name and choose it from the list.
4. Tick **Do not call**, **SMS opt-out** or **WhatsApp opt-out** if the customer asked not to be contacted that way. The system then blocks those calls or messages.
5. Click `Create`.

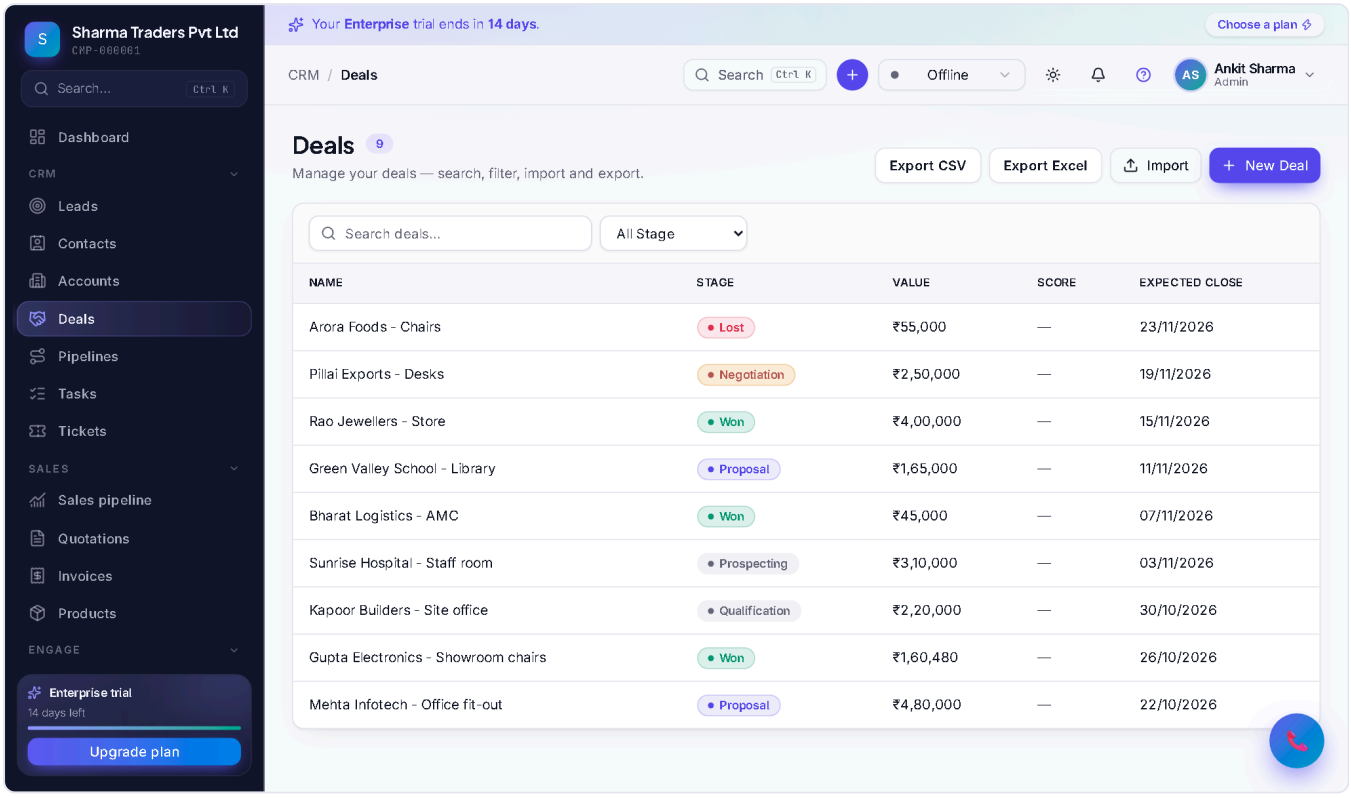

Accounts: one row per customer company.

A contact's page shows its remarks and the full history (calls, messages, quotations, invoices) and the same quick buttons as a lead.

8 Deals and pipelines

A **deal** is a sale you are working on, with a value and a stage. A **pipeline** is your list of sales stages.

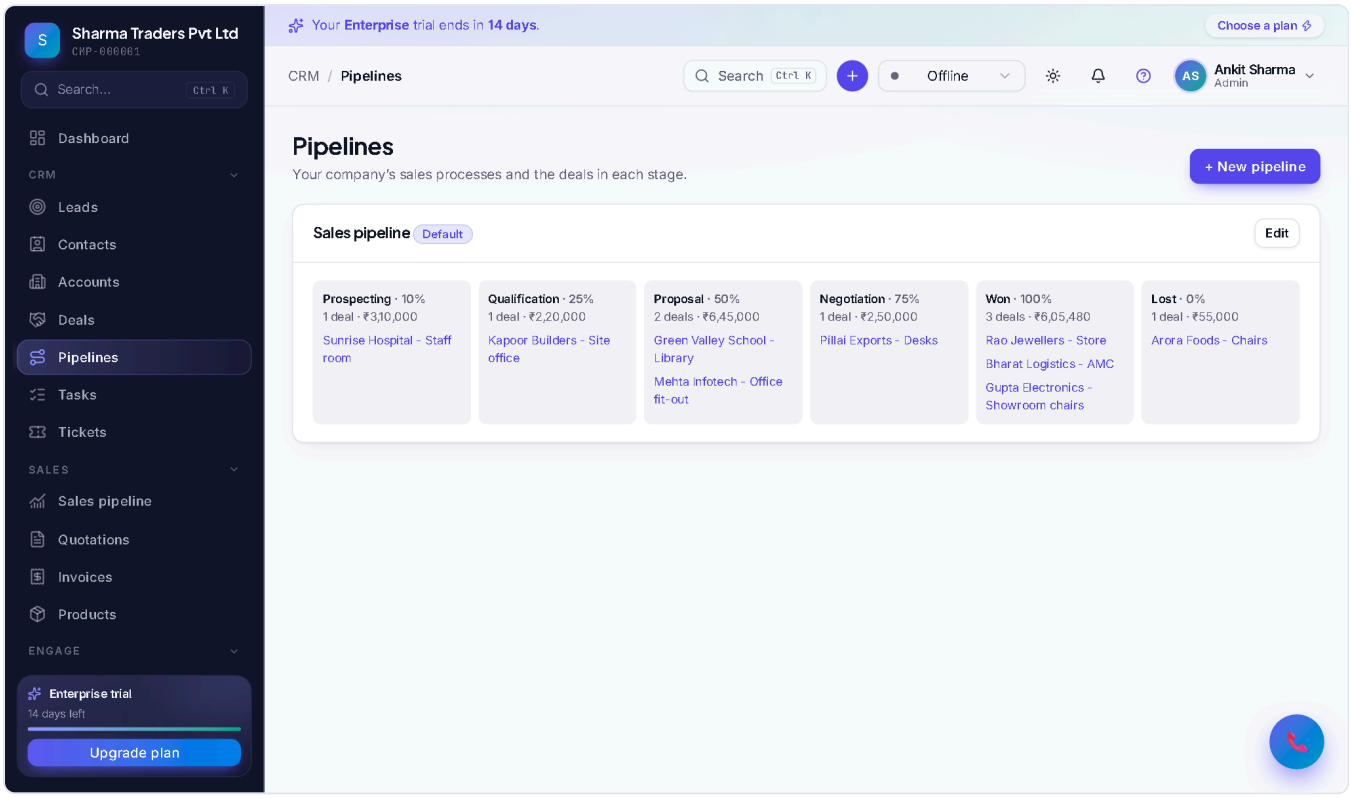

Deals with stage, value, score and expected close date.

8.1 Add a deal

1. **Deals** → **+ New Deal**.
2. Enter the deal name and value, choose the stage and expected close date, and link the contact and account.
3. Click **Create**. Move the deal to the next stage by editing it as the sale progresses.

8.2 Pipelines

Pipelines shows every stage with the number of deals, their total value and the latest deals. Click a deal name to open it.

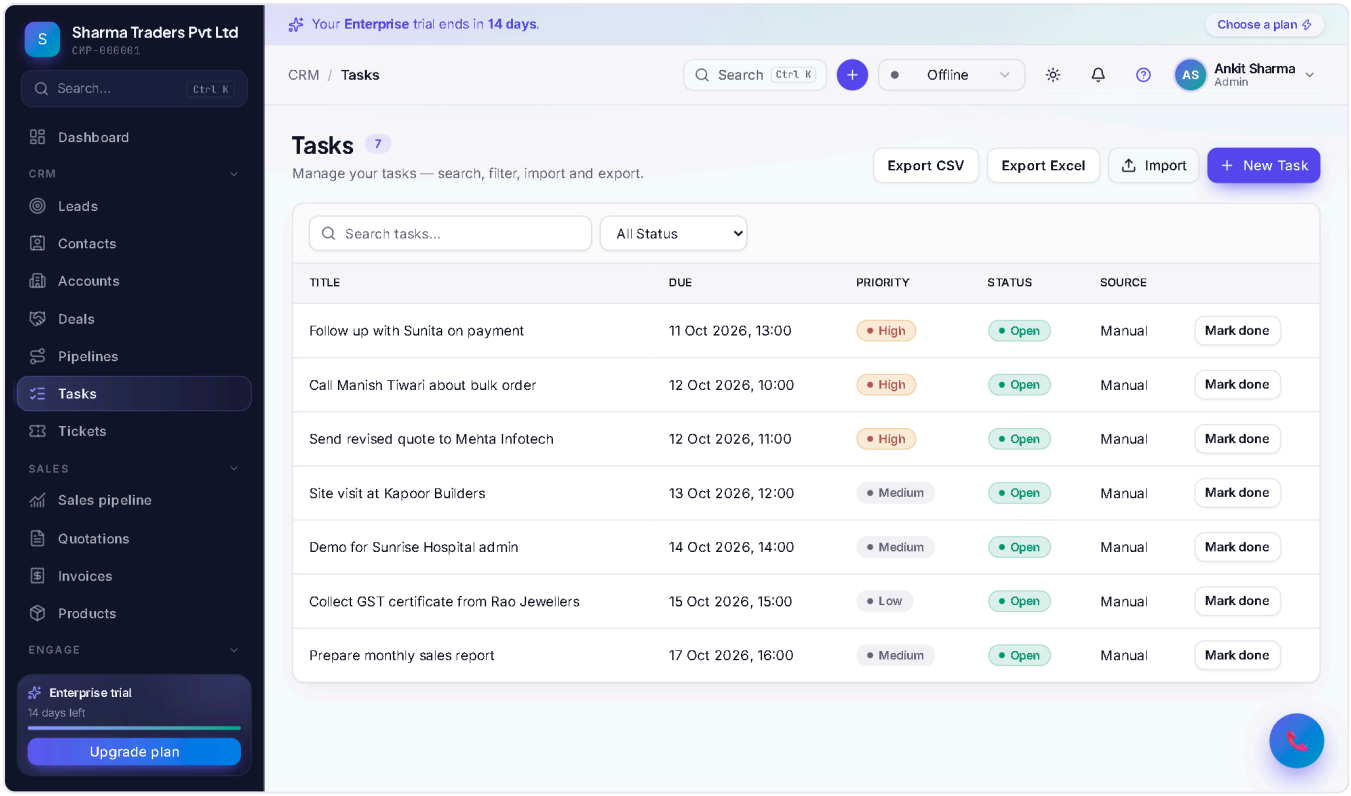

The pipeline board: count and value per stage.

The default stages are Prospecting (10%), Qualification (25%), Proposal (50%), Negotiation (75%), Won and Lost. The percentage is the chance of winning, used for forecasts. Admins and sales managers can click **Edit** or **+ New pipeline** to rename, add, reorder or remove stages. Every pipeline ends with Won and Lost.

9 Tasks and reminders

Tasks are your to-do list: calls to make, quotes to send, visits to do.

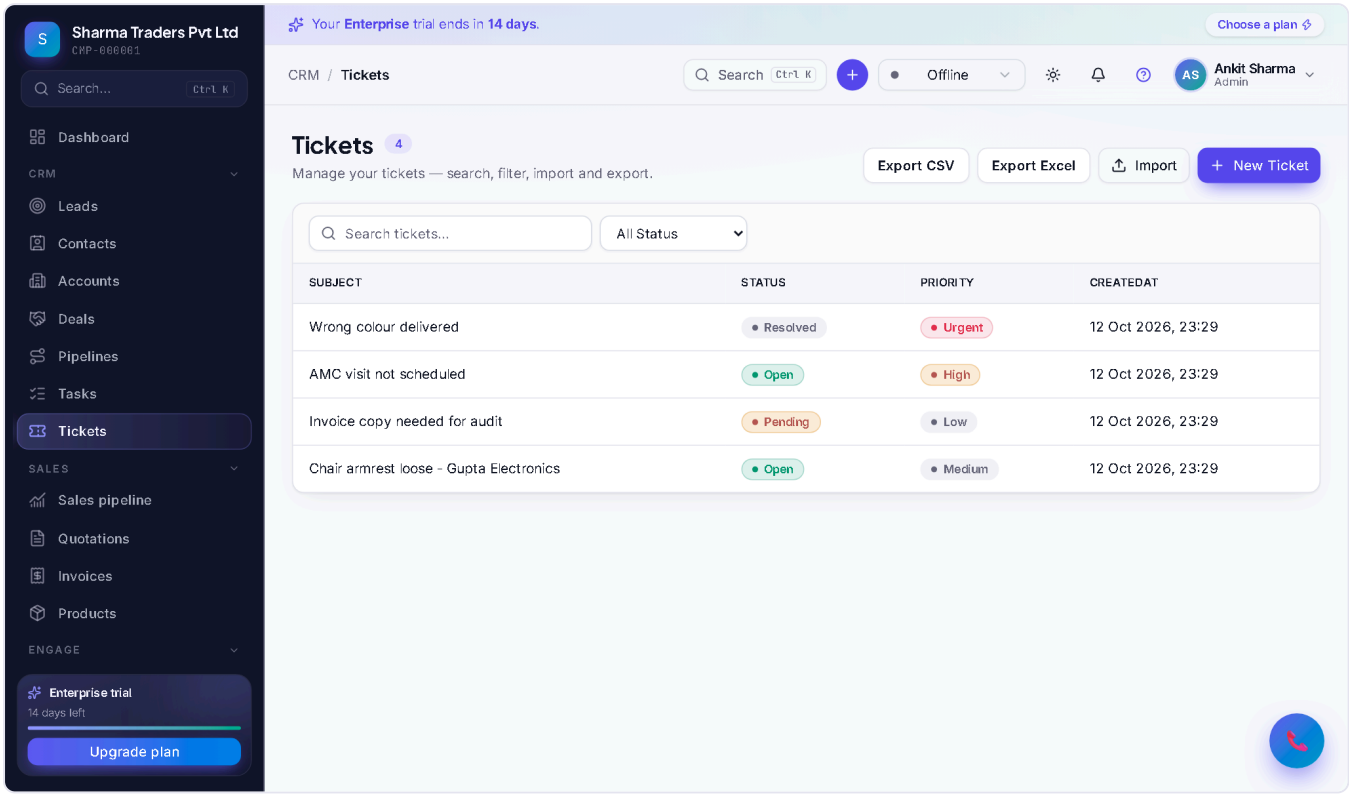

Tasks with due time, priority and status.

1. **Tasks** → **+ New Task** (or the **+** button anywhere).
2. Enter a title, the due date and time, and the priority.
3. Click **Create**. New tasks are assigned to you. A manager can assign tasks to others; the person gets a notification.
4. When it is done, set the status to **Done** (or tick it on the mobile app).

> **Reminders**
>
> When a task is due you get a notification in the CRM (bell) and on your phone (if you use the mobile app and allowed notifications). Appointments remind you 15 minutes before, and callbacks at the agreed time.

10 Support tickets

Tickets track customer problems until they are solved.

Tickets with status and priority.

1. **Tickets** → **+ New Ticket**.
2. Enter the subject and description, the priority (Low, Medium, High, Urgent) and the customer (contact).
3. Update the status as you work: **Open** → **Pending** → **Resolved** → **Closed**.

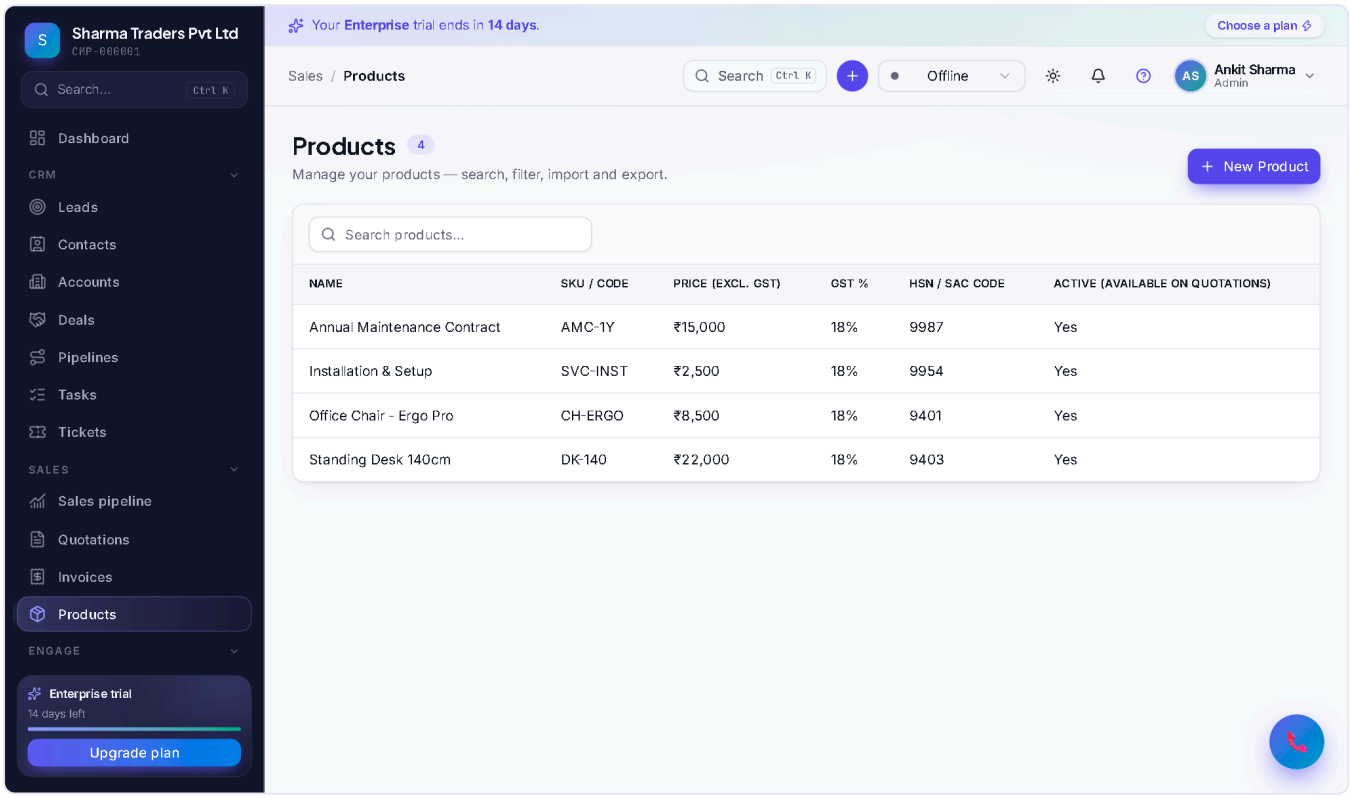

Use the status filter to see, for example, only open tickets.

11 Products, quotations and invoices

CogniCRM makes GST-ready quotations and tax invoices. It works out CGST + SGST for customers in your state and IGST for other states, using the GSTIN or state you enter.

11.1 Before you start (admin, once)

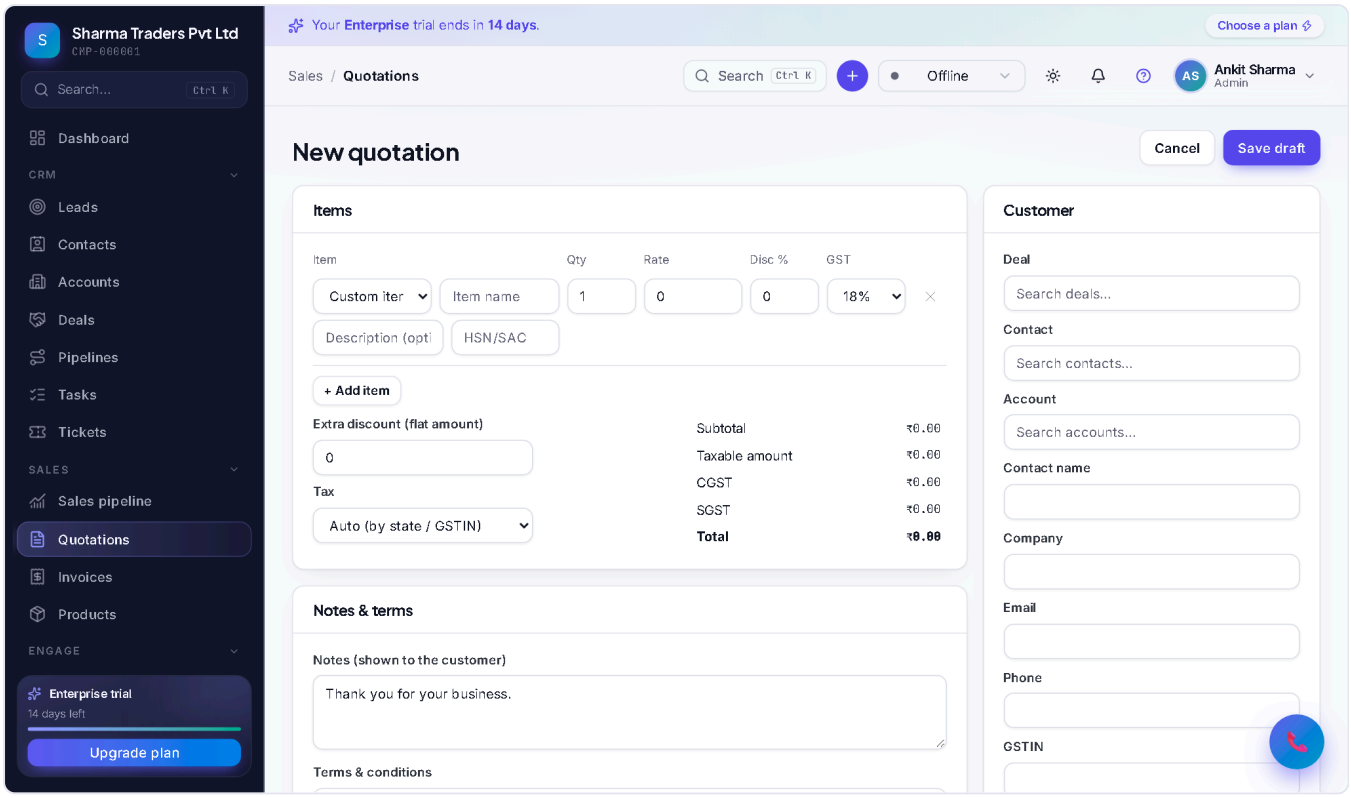

- **Settings** → **Invoice details**: legal name, GSTIN, state, PAN, bank account, IFSC, UPI ID, number prefixes, default GST rate and terms (chapter 16).
- **Products**: add each product or service with price (excluding GST), unit, GST % and HSN/SAC code.

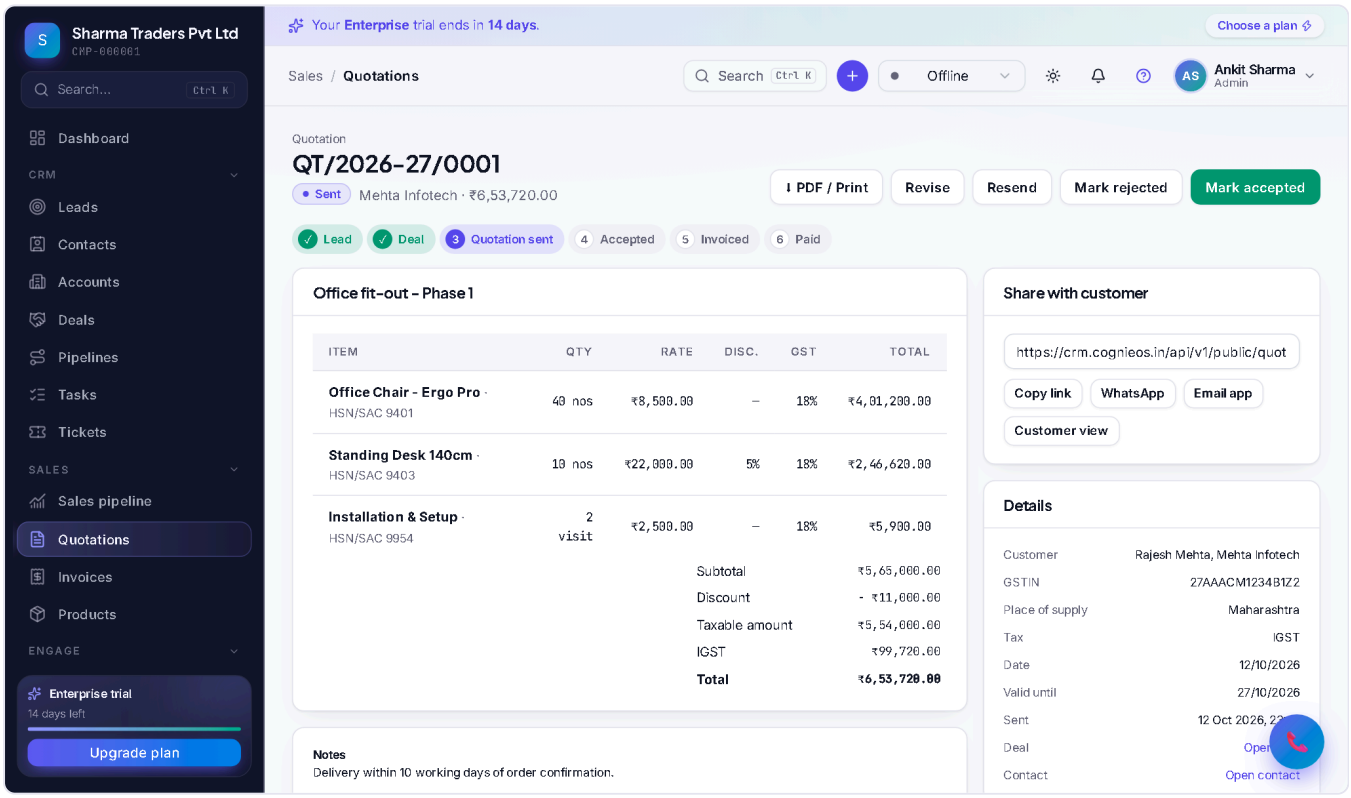

Products appear in quotations with their price and GST.

11.2 Create and send a quotation

1. **Quotations** → **+ New quotation**, or **New quotation** from a deal or contact page (the customer is filled in for you).
2. Under **Customer**, link the deal or contact, or type the name, company, email, phone, GSTIN and state (place of supply).
3. Under **Items**, pick a product or type a custom item, then enter the quantity, rate, discount % and GST. The totals, tax split and round-off update as you type.
4. Add notes, terms and a "valid until" date, then click **Save draft**.
5. On the quotation page click **Send to customer**. Email it (if email is set up), or use **Copy link** or **WhatsApp** to share the customer link.

The quotation editor: items on the left, customer and details on the right, live GST totals.

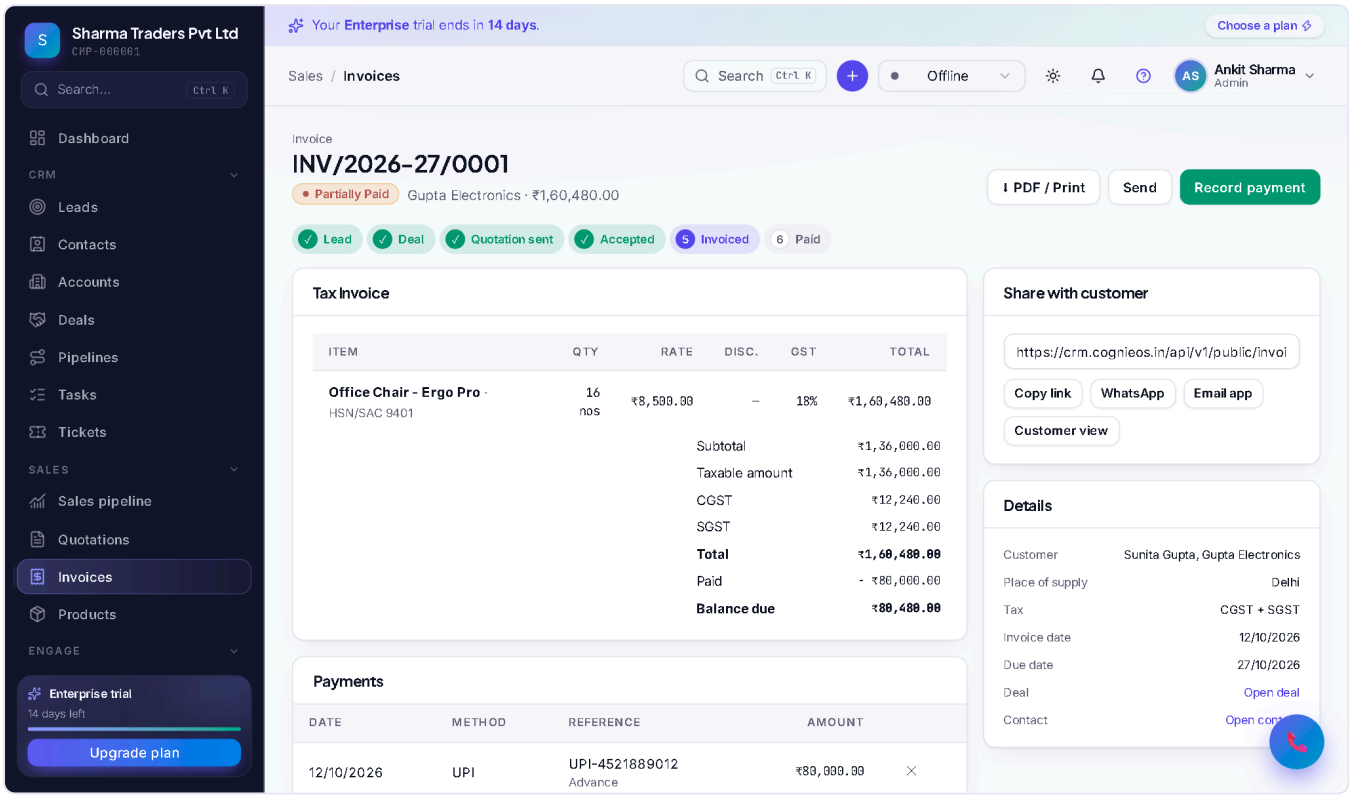

A sent quotation: status steps, items with GST, and sharing options.

- The customer opens the link in any browser and can view, print or download it. You get a notification when they open it.
- **Mark accepted** or **Mark rejected** when the customer replies. **Revise** makes a new version (Rev 2…).
- **PDF / Print** opens a print-ready copy; choose "Save as PDF" in the print window.

11.3 Invoices and payments

1. On an accepted quotation click **Create invoice** (or **Invoices** → **+ New invoice**).
2. Check the draft and click **Issue** (or **Issue & send**). The invoice gets its number, for example INV/2026-27/0001. Numbers restart every financial year and never have gaps. An issued invoice cannot be edited.
3. When the customer pays, click **Record payment**: amount, date, method (UPI, bank transfer, cash, cheque, card…) and the reference (UTR or cheque number). Part payments are fine; the balance updates.

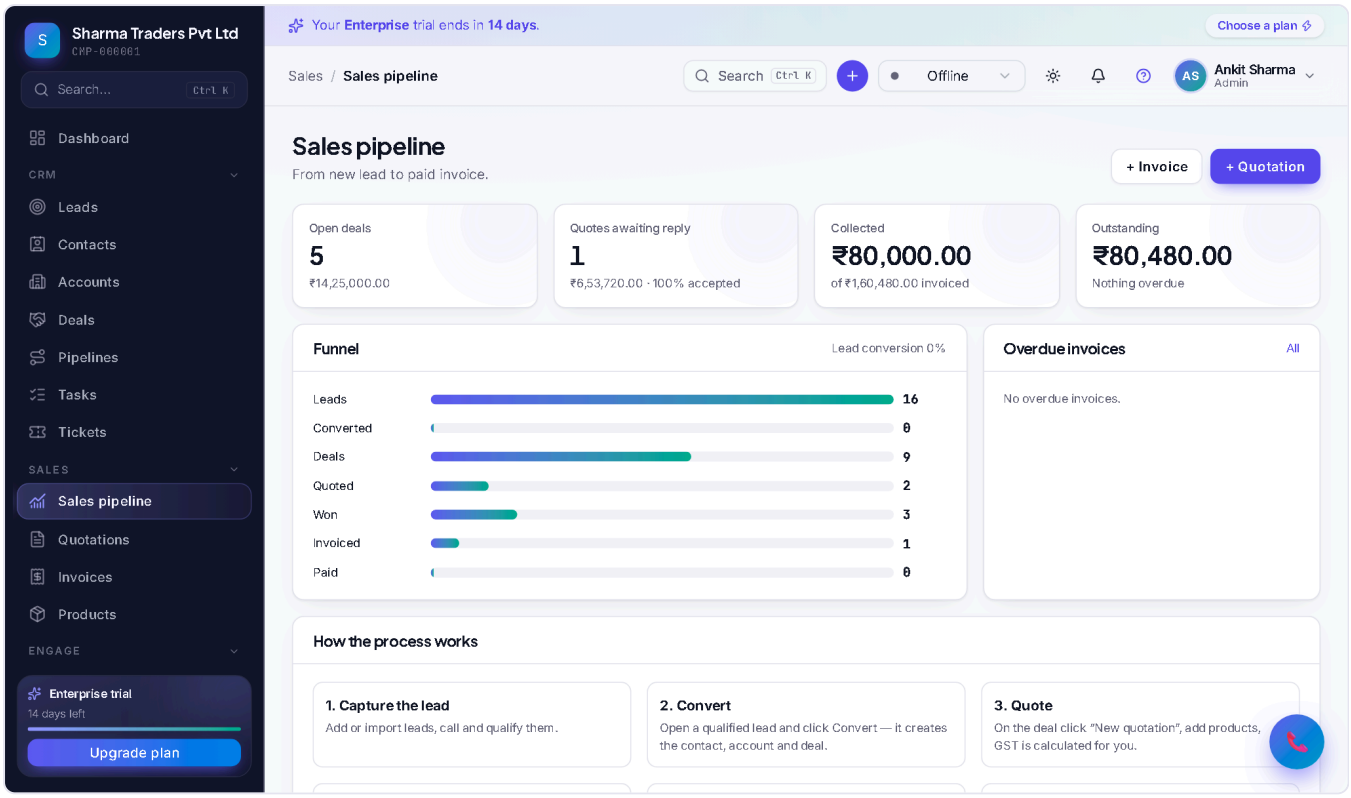

An issued invoice with a part payment and the balance due.

An invoice that is past its due date shows as overdue and the team gets a reminder. A wrong invoice with no payments can be **voided** (with a reason).

11.4 Sales pipeline

Sales pipeline shows the whole journey from lead to payment: quotations sent and accepted, invoices issued, amounts collected and amounts due.

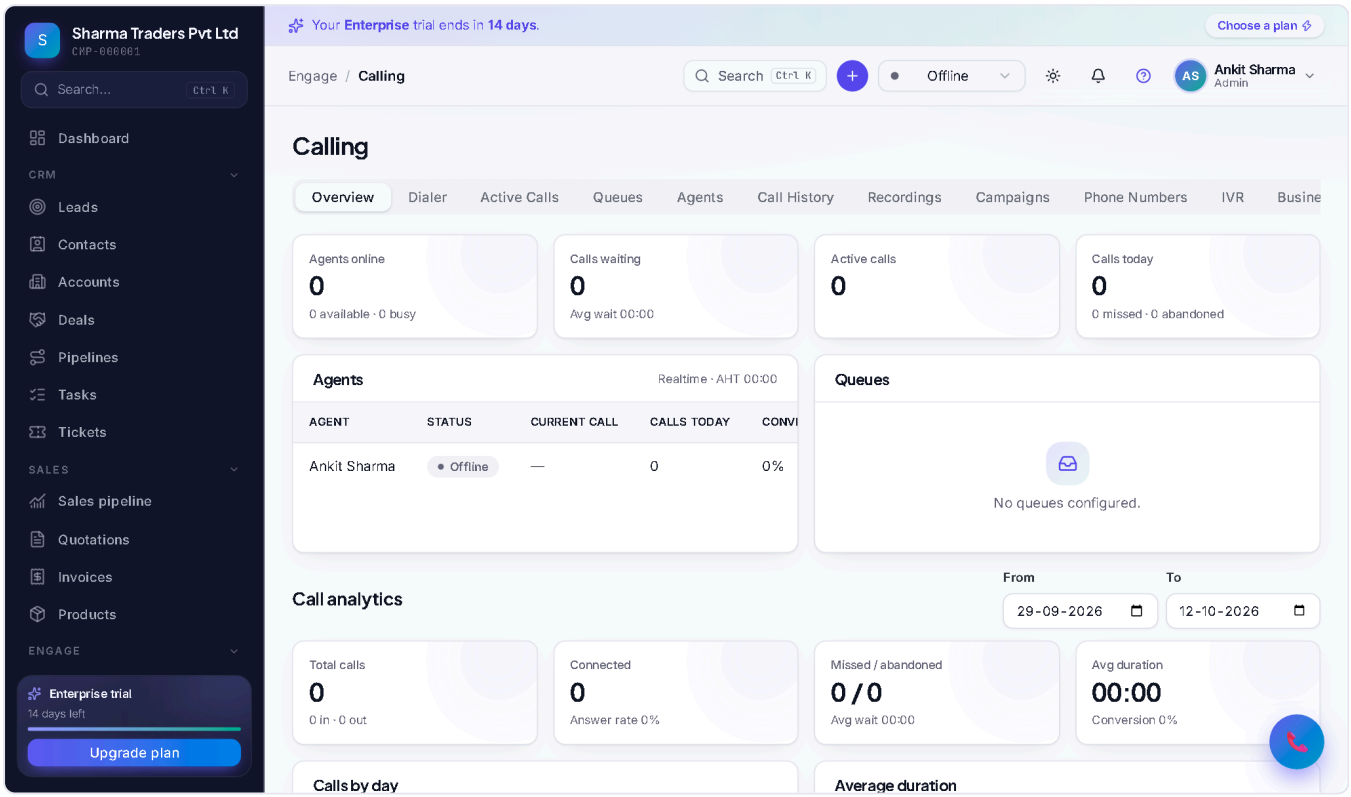

Sales pipeline overview.

12 Calling and callbacks

Calling works in two ways, depending on how your company is set up:

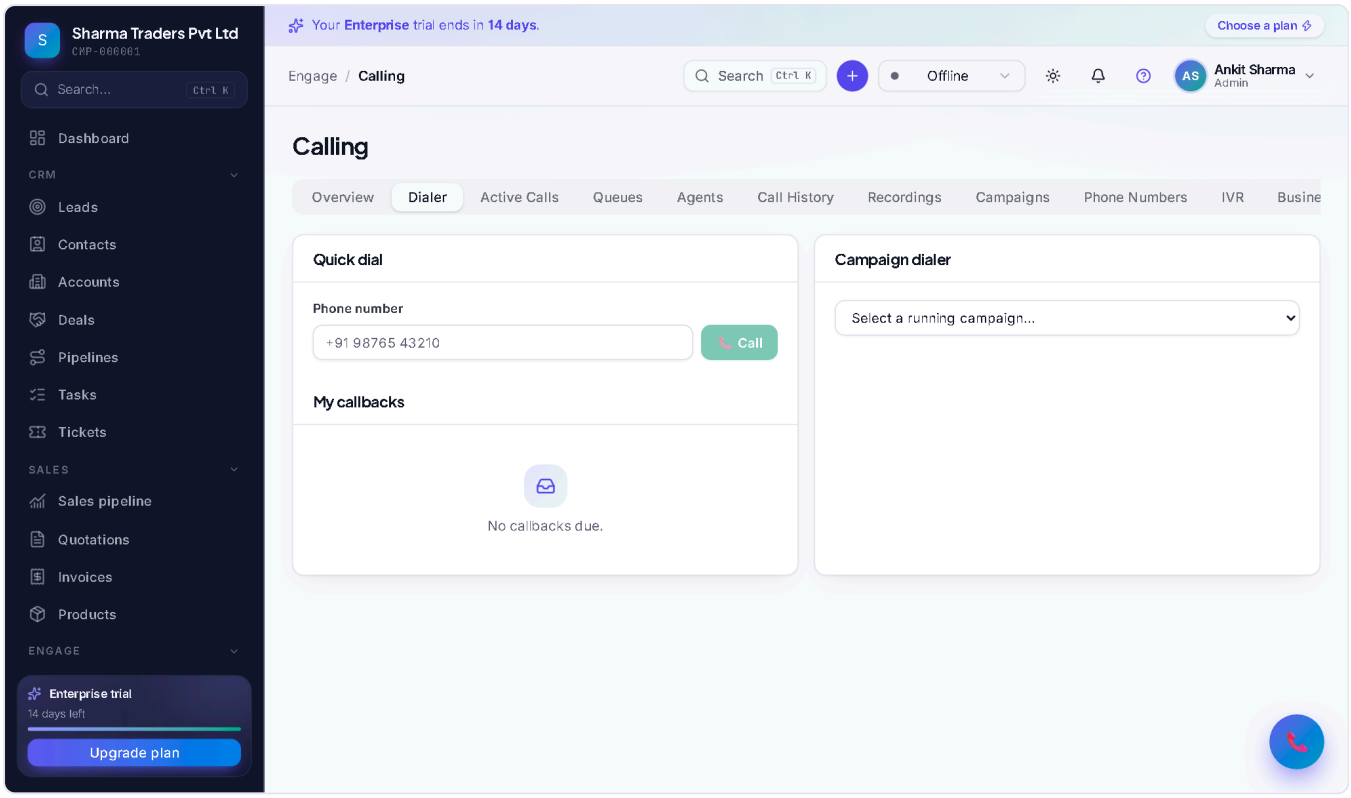

- **With a company phone line** (set up by the admin under Calling → Settings): call from the browser or have the system connect your phone, with recordings and call reports.
- **Without one:** when you click call on the web, the CogniCRM app on your phone opens the dialer for that number and saves the call afterwards.

Calling overview: live calls, agents and today's numbers.

12.1 Make a call

1. Click the green phone button on a lead or contact, or open **Calling** → **Dialer** and type the number.
2. After the call, the **wrap-up** window opens: choose how the call ended (interested, call back, not reachable…), add notes, and if needed create a task, schedule a callback, update the lead status or deal stage, create a ticket, or send a WhatsApp or email.
3. Click **Save & finish**.

The dialer with your callbacks due.

12.2 Callbacks

When a customer says "call me tomorrow at 6 pm", click **Callback** on their page (or choose a callback in the wrap-up), pick the date and time and add what they said. You are reminded at that time, on the web and on your phone. A time outside your company's calling hours is saved with a warning.

12.3 Other calling pages

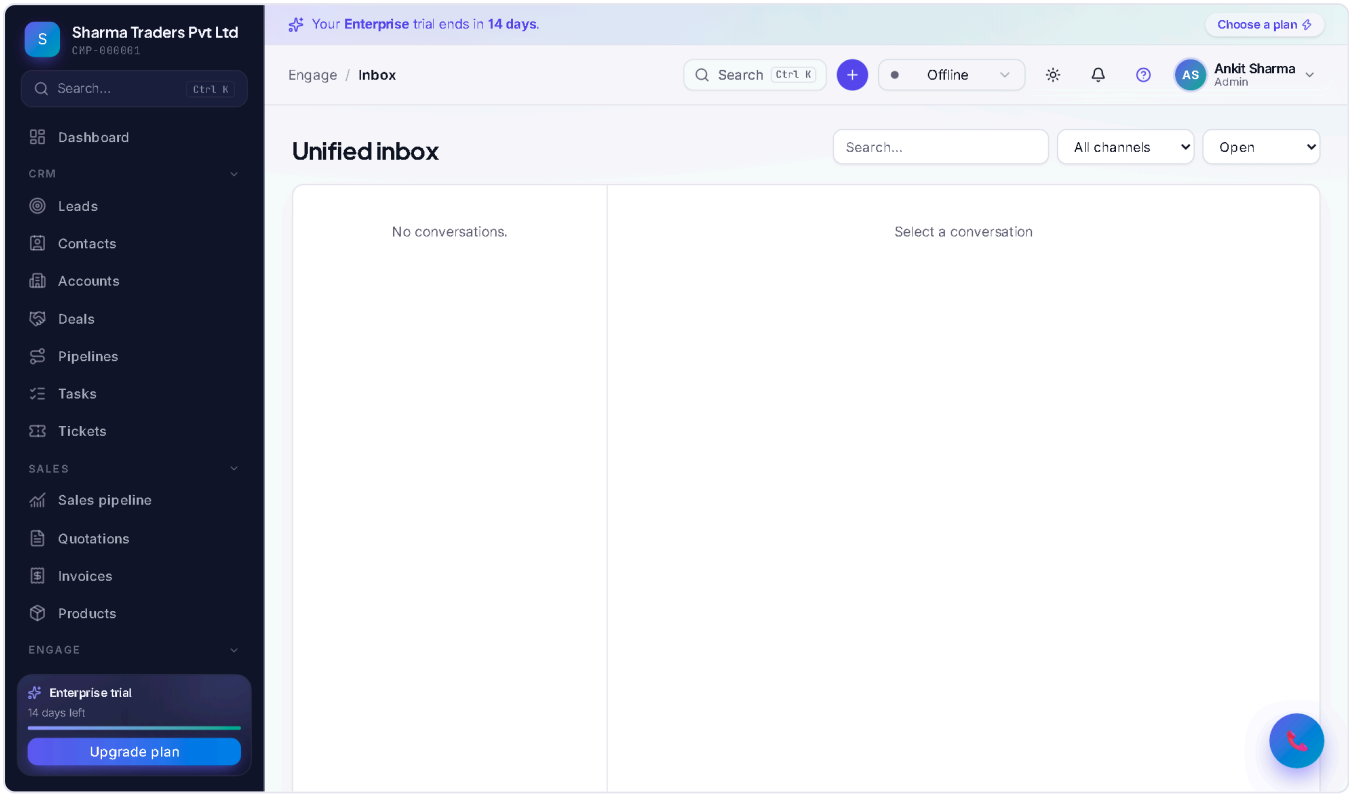

Tab	What it is for
Active Calls	Calls happening now; supervisors can listen in silently when the calling provider supports it.
Call History	All calls with filters by date, agent and direction; open a call to see notes, recording and transcript.
Recordings	Call recordings and voicemails (if recording is turned on).
Campaigns	Outbound calling lists: import numbers, set calling hours and retries, and let agents call through them.
Queues, Agents	How incoming calls are shared between agents.
Phone Numbers, IVR, Business Hours, Settings	Admin set-up of numbers, the "press 1 for sales" menu, working hours and the calling provider.

Do-not-call and calling hours

Numbers on the do-not-call list, and calls outside your company's calling hours, are blocked to keep you compliant.

13 Inbox (WhatsApp, SMS, email)

The **Inbox** brings customer conversations from WhatsApp, SMS, email and your website chat into one place.

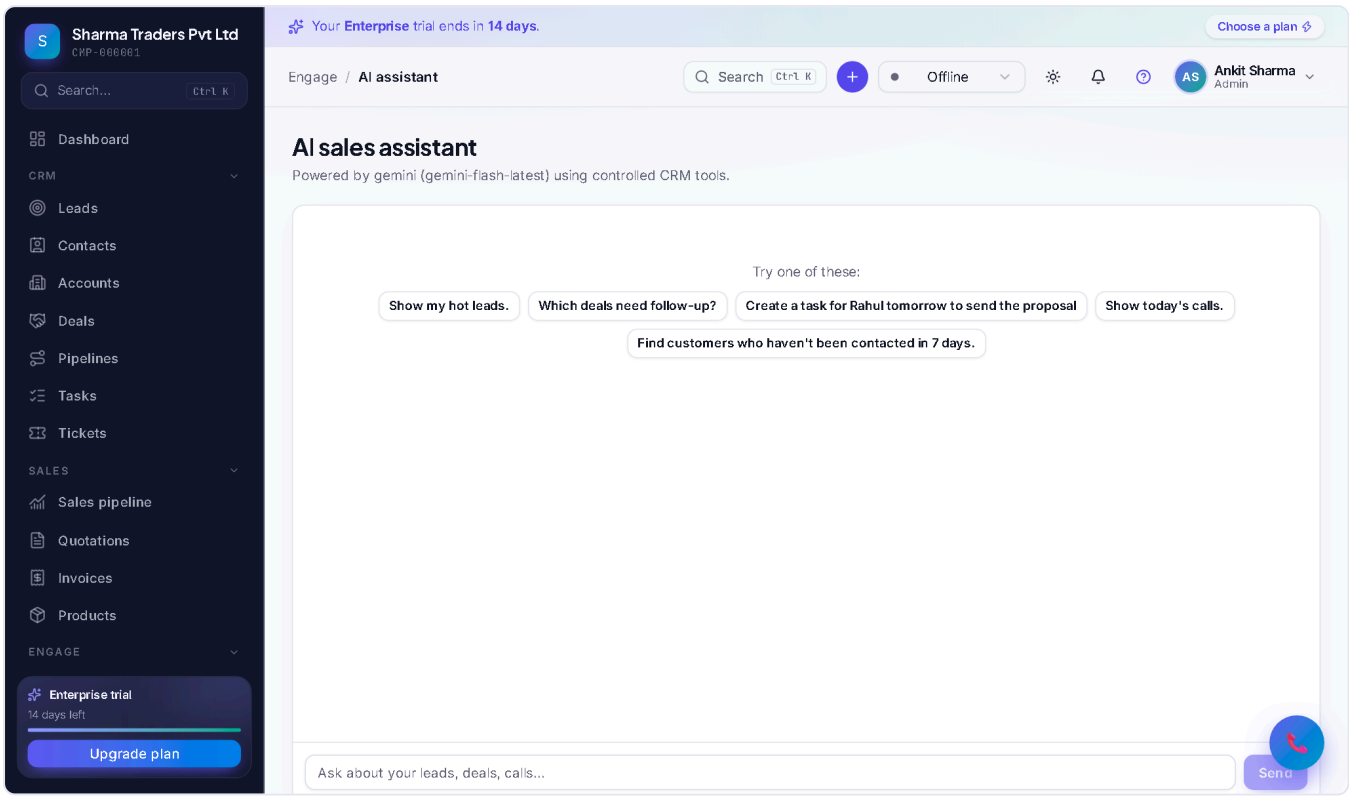

The unified inbox.

1. Choose a conversation on the left. The customer's details and history are shown with it.
2. Type your reply and send, or choose an approved **template** (WhatsApp requires approved templates to start a conversation).
3. Click **Assign to me** to take over a conversation, so colleagues know you are handling it.

Message templates are managed under **Settings** → **Message templates**. WhatsApp, SMS and email must first be connected under **Integrations**.

14 AI assistant

If AI is enabled for your company, you can ask the CRM questions or give it instructions in plain English or Hinglish.

The AI assistant.

Examples:

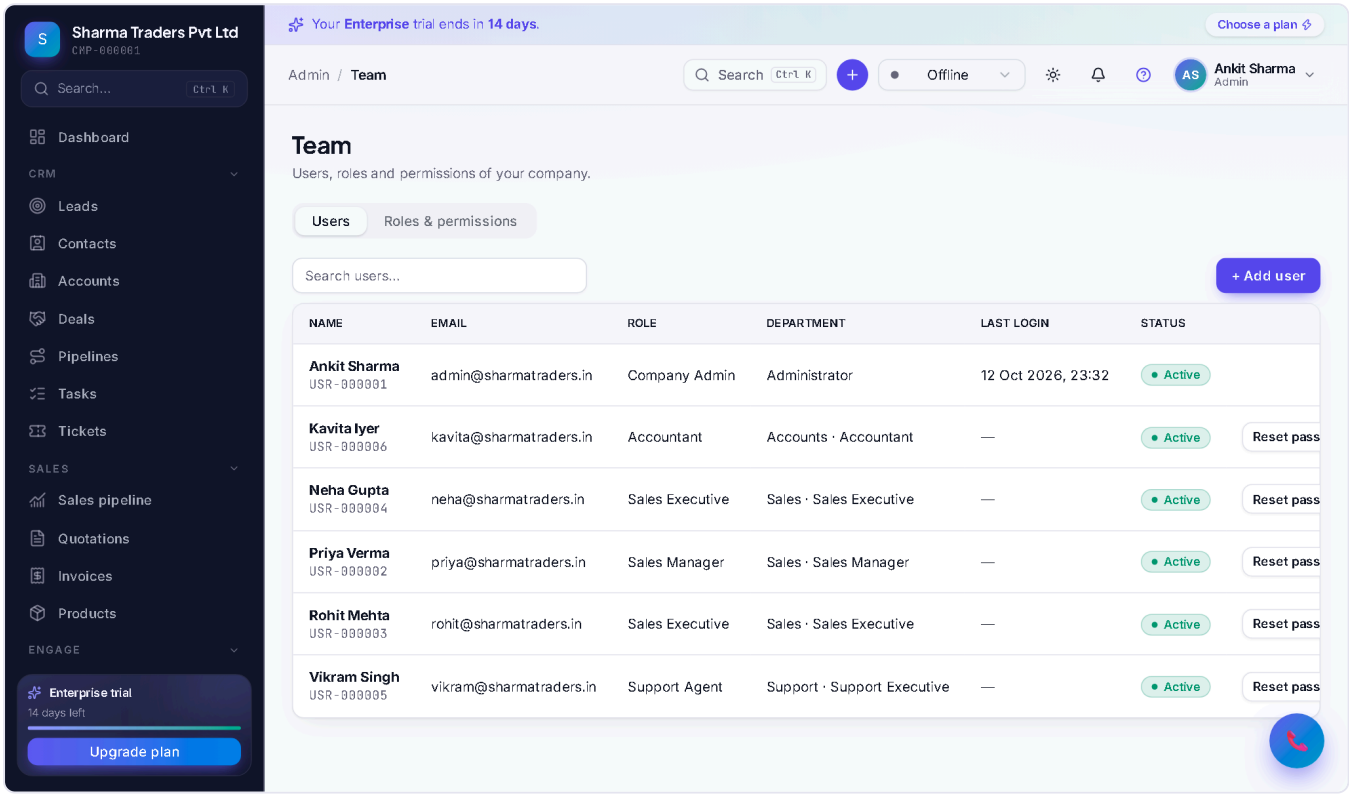

- "Show my deals" / "Mere open leads dikhao"
- "Create a task for tomorrow to send the quote to Mehta Infotech"
- "Who is +91 98765 43210?"
- "Summarise my calls today"

The assistant only uses the tools and data your role allows. Other AI features include call summaries, lead qualification, email drafting, lead and deal scores and "next best action" suggestions.

15 Team, roles and passwords

15.1 Add an employee (admin or HR)

1. Team → Users → + Add user.
2. Enter the name, email, a temporary password (8+ characters), the role, department, designation and phone (used for calls).
3. Click Save. Share the login with the employee. Each employee also gets an **Employee ID** (USR-000123) they can sign in with.

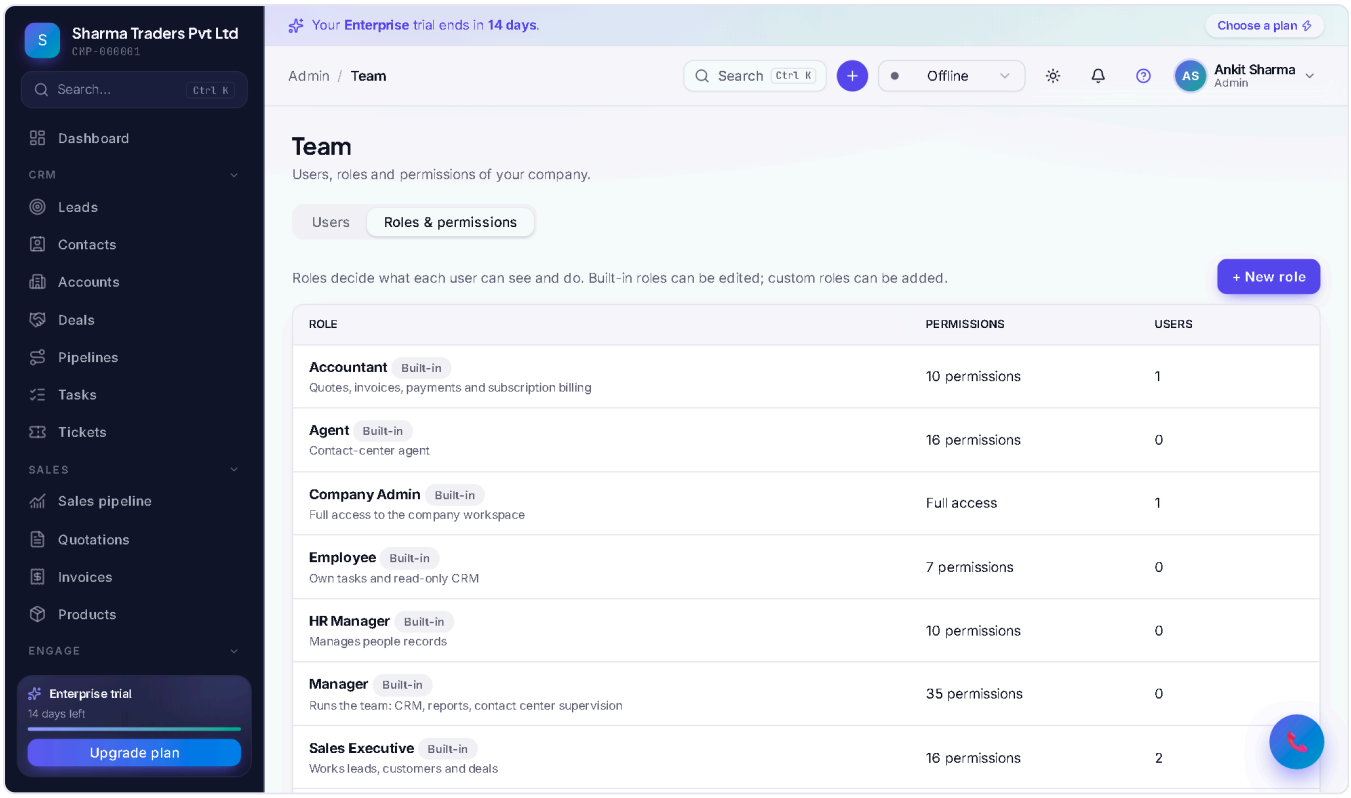

Team members, roles and status.

- **Reset password:** click Reset password on the person's row. A random password is created; copy and share it. The person is signed out on all devices.
- **Remove:** click Remove. The person can no longer sign in; their records and history are kept.
- **Change your own password:** click your name (top right) → Change password. Your other devices are signed out.

15.2 Roles and permissions

Team → Roles & permissions: open a role to see exactly what it allows, or click + New role to make your own by ticking permissions.

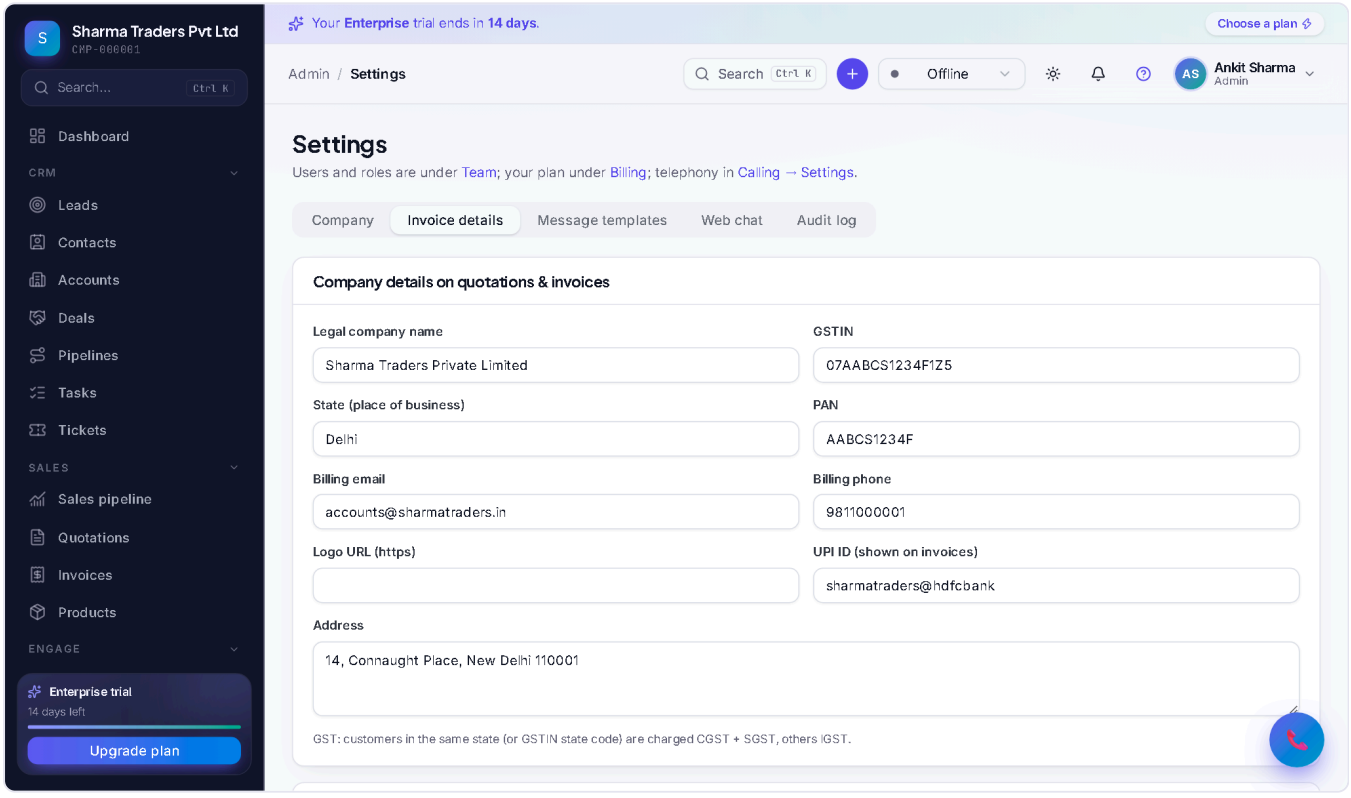

Roles & permissions.

16 Settings, integrations and plan

16.1 Settings

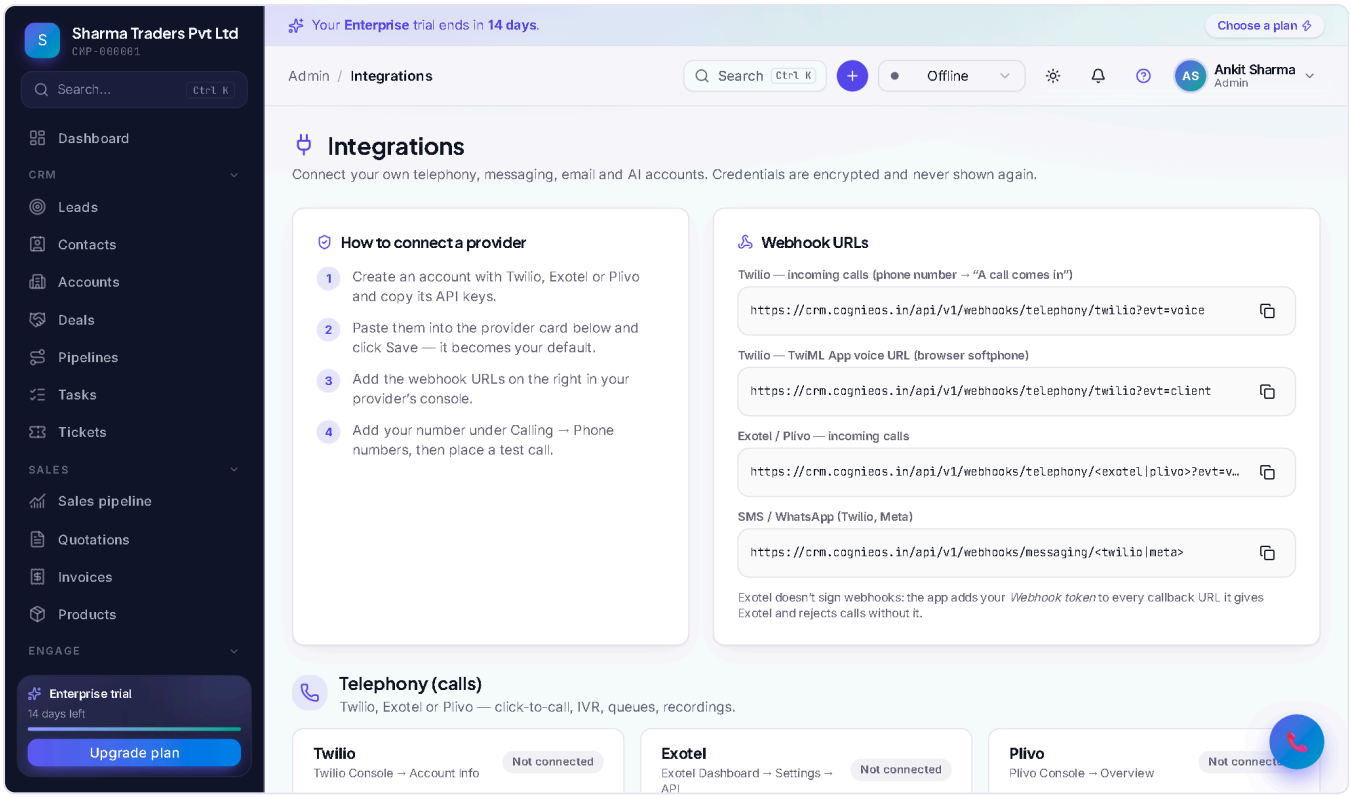

Tab	What you set
Company	Business details, address, logo, brand name and colour (shown to employees, also in the app), time zone, currency, date format, language, tax name and rate, email sender name, notification preferences.
Invoice details	Legal name, GSTIN, state, PAN, billing email and phone, logo, UPI ID, bank account and IFSC, quotation and invoice number prefixes, validity and payment-terms days, default GST rate, default notes and terms.
Message templates	Reusable SMS, WhatsApp and email texts with {{variables}}.
Web chat	Code to add a chat box to your website; chats arrive in the Inbox.
Audit log	Who did what and when (sign-ins, exports, imports, settings changes, payments…).

Invoice details. Each field is checked: GSTIN 15 characters, IFSC 11, UPI like name@bank, and so on.

16.2 Integrations

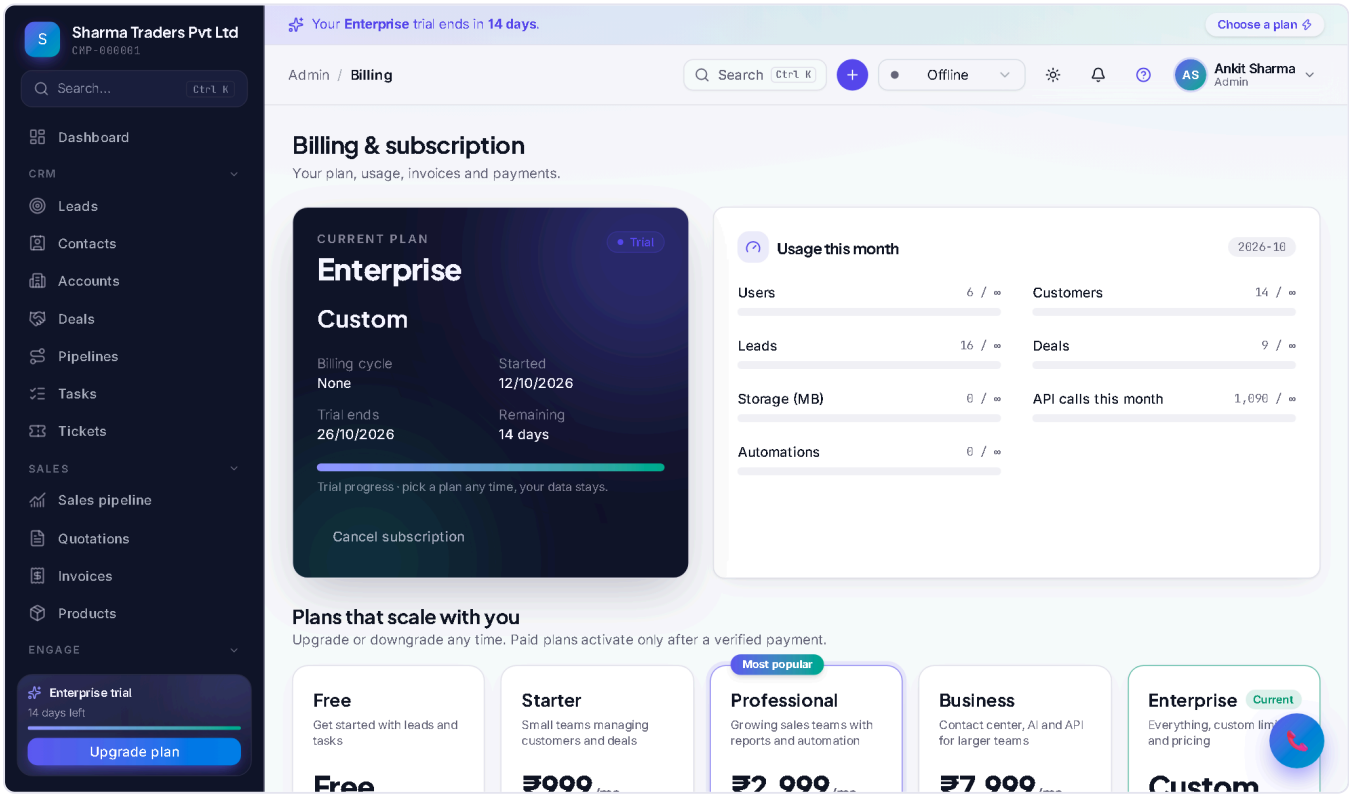

Integrations connects outside services to your company: calling (Twilio, Exotel, Plivo), SMS, WhatsApp (Twilio or Meta), email (SMTP), AI (Google Gemini or Anthropic Claude) and call transcription (Deepgram). Enter the keys from the provider's website; they are stored encrypted. Features stay switched off until their integration is connected.

Integrations.

16.3 Billing and plan

Billing shows your plan, trial days left, usage against limits (users, leads, customers…) and invoices for your subscription. Click **Choose a plan** or **Upgrade plan** to change it.

Billing & subscription.

17 The mobile app

The CogniCRM app is for **employees**: sales, support and field staff. Company admins use the web app.

17.1 Install the app (Android)

1. Get the app file (**CogniCRM-1.0.0-….apk**) from your administrator, for example on WhatsApp or Google Drive.
2. Tap the file. If Android asks, allow **Install unknown apps** for the app you opened it with (WhatsApp, Files or Chrome), then tap `Install`.
3. If you had an older CogniCRM app and Android says the app could not be installed, uninstall the old app first, then install again.
4. Open **CogniCRM** and allow **notifications** (and phone/calls if asked), so you get reminders and can call from the app.

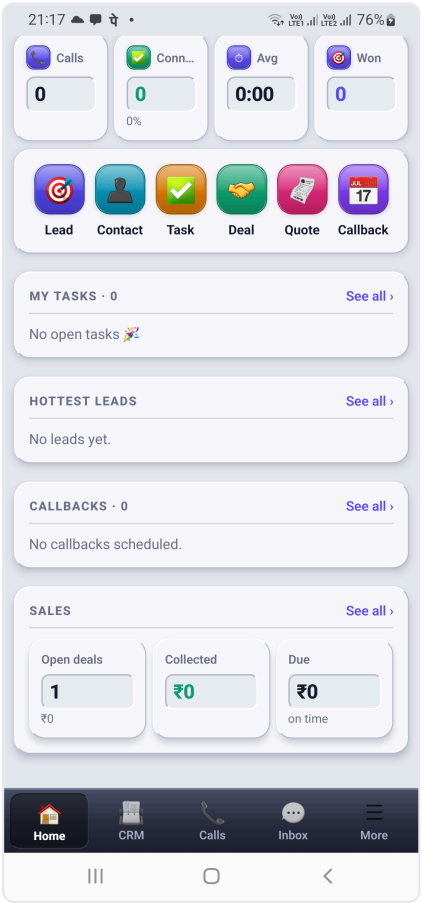

> **Works on every Android phone**
> The app supports Android 7 and newer, on both older 32-bit and newer 64-bit phones. Your administrator can also install it on many phones at once by USB.

17.2 Sign in

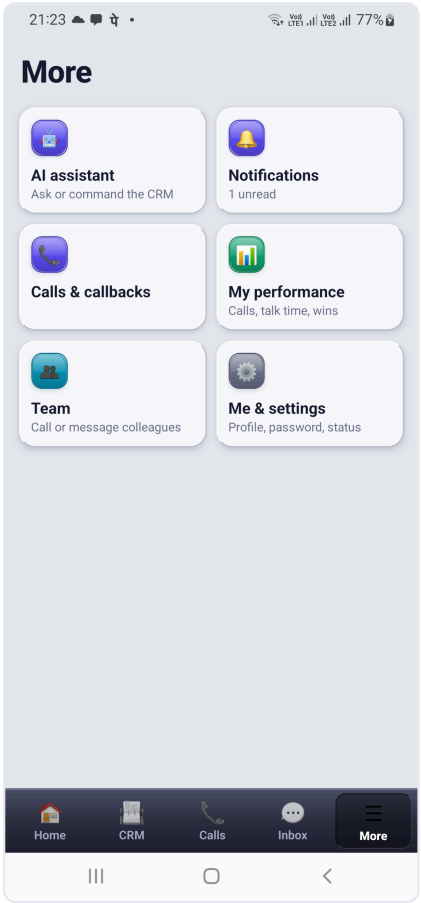

Enter your work email **or** Employee ID (USR-000123) and your password. If you belong to several companies, tap `Sign in with a Company ID`. Company admins are not allowed in the app; use an employee account.

Sign in

Home

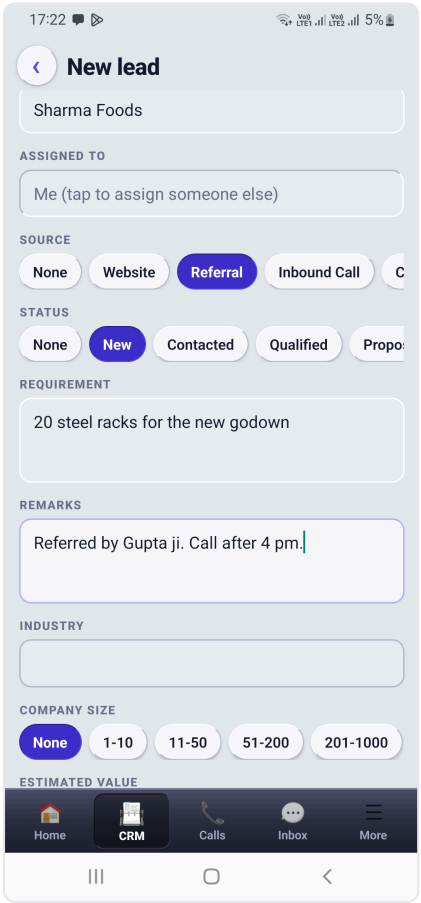

More menu

17.3 What is in the app

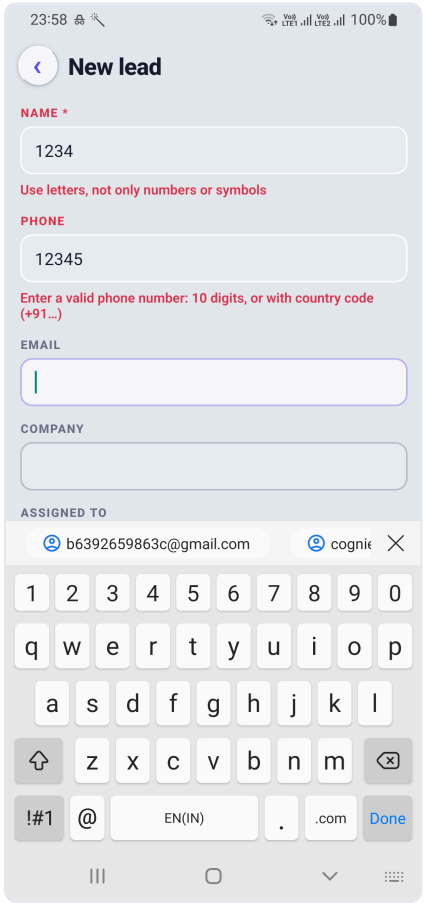

Tab	What you can do
Home	Today's calls and connect rate; quick buttons for a new Lead, Contact, Task, Deal, Quote or Callback; your open tasks; hottest leads; callbacks due; your sales.
CRM	Leads, contacts, accounts, deals, tasks, appointments and products: search, filter, scroll, open, edit, call, WhatsApp. Also the sales pipeline, quotations and invoices.
Calls	Your calls and callbacks; call a customer; after each call, choose the outcome and add notes.
Inbox	Reply to WhatsApp, SMS and email conversations.
More	AI assistant, Notifications, Calls & callbacks, My performance, Team (call or message colleagues), Me & settings (profile, password, status).

17.4 Add a lead or task on the phone

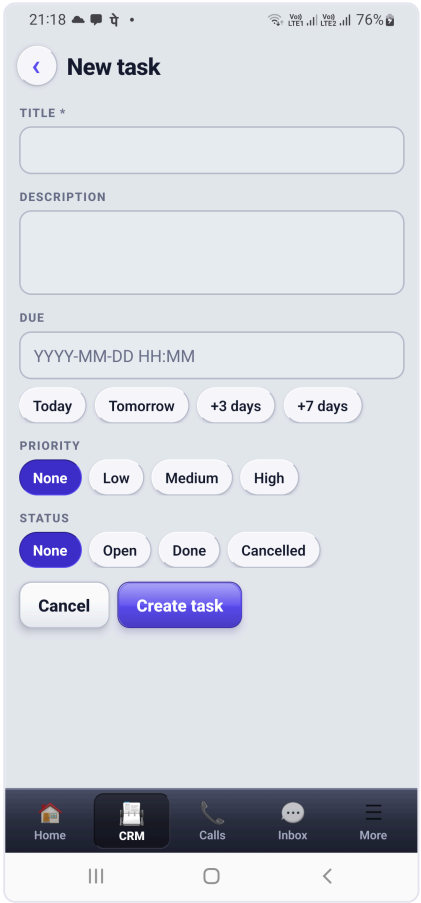

1. On Home tap **Lead** (or **Task**, **Callback**...).
2. Fill in the form. As on the web, wrong phone numbers or emails are shown in red under the field.
3. For a due date, tap **Today**, **Tomorrow**, **+3 days** or type the date and time.
4. Tap **Create**.
5. On a lead, contact or deal, type in the **Remarks** box and tap **+ Add remark** after every call or visit.

New lead with requirement and remarks

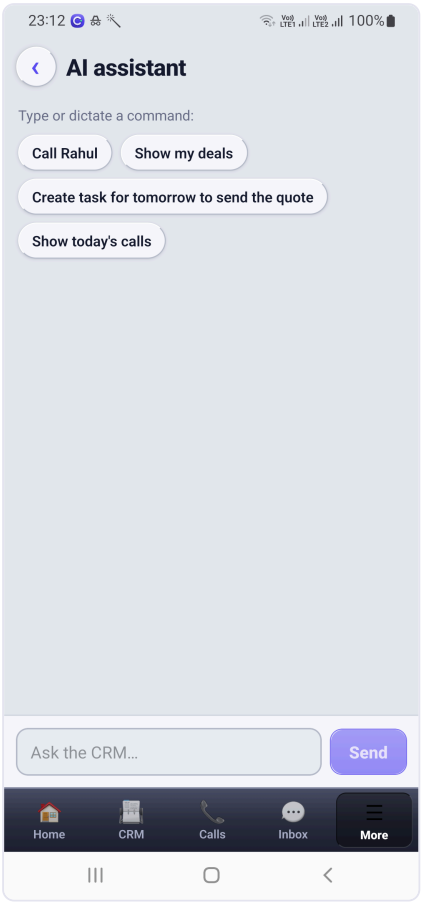

Mistakes shown in red

New task

17.5 Notifications

The app notifies you about tasks due, callbacks, appointments, tasks assigned to you, missed calls, voicemails, new messages, quotations opened or accepted, overdue invoices and calls started for you from the web. Tap a notification to open the record. Notifications need internet and permission for CogniCRM in your phone's settings.

AI assistant in the app

18 Questions and problems

Question or problem	What to do
I forgot my password.	Ask your company admin to reset it (Team → Reset password). Then change it yourself after signing in.
I was signed out.	Sessions end after 12 hours, or when your password is changed or reset. Sign in again.
"Too many requests" when signing in.	After many wrong passwords your account is locked for 15 minutes for safety. Wait, then try again with the right password; colleagues are not affected.
The mobile app says it is for employees.	Company admin accounts use the web app. Sign in with your employee account.
A field shows a red message and I can't save.	Read the message under the field: for example the phone needs 10 digits, or the email is incomplete. Fix it and save again.
Some rows were not imported.	The import result lists each row number and the reason. Fix those rows in the file and import again with "Skip records that already exist".
I can't see a menu or button.	Your role does not include it, or your plan does not include that module. Ask your admin.
Calls, WhatsApp, email or AI show "not configured".	The admin must connect that service under Integrations (or Calling → Settings).
No notifications on the phone.	Check internet, and allow notifications for CogniCRM in Android settings. Battery-saver modes can delay them.
GST is CGST + SGST but should be IGST (or the other way).	Check your company state and GSTIN in Invoice details, and the customer's state or GSTIN on the quotation.
The customer link of a quotation doesn't open.	Copy the link again from the quotation page; a revised quotation has a new link.

Need more help?
Contact your company's CogniCRM administrator first. Administrators can contact COGNIEOS support.
